INTRODUCTION

TO BUILD a railroad, reclaim lands, give new impulse to enterprise, and offer new doors to ambitious capital—these are plases of the ever-widening life and activity of this Nation. The United States, however, does more; it furnishes playgrounds to the people which are, we may modestly state, without any rivals in the world. Just as the cities are seeing the wisdom and necessity of open spaces for the children, so with a very large view the Nation has been saving from its domain the rarest places of grandeur and beauty for the enjoyment of the world.

And this fact has been discovered only recently by many. Europe being closed, thousands for the first time have crossed the continent and seen one or more of the national parks. That such mountains and glaciers, lakes and canyons, forests and waterfalls were to be found in this country was a revelation to many who had heard but had not believed. It would appear from the experience of the past year that the real awakening as to the value of these parks has at last been realized, and that those who have hitherto found themselves enticed by the beauty of the Alps and the Rhine and the soft loveliness of the valleys of France may find equal if not more stimulating satisfaction in the mountains, rivers, and valleys which this Government has set apart for them and for all others.

There is no reason why this Nation should not make its public health and scenic domain as available to all its citizens as Switzerland and Italy make theirs. The aim is to open them thoroughly by road and trail and give access and accommodation to every degree of income. In this belief an effort is making now as never before to outfit the parks with new hotels and public camps which should make the visitor desire to linger rather than hasten on his journey. One large new hotel has been built in the Valley of the Yosemite with an annex high overhead on Glacier Point, while more modest lodges have been dotted about in the obscurer spots to make accessible the rarer beauties of the inner Yosemite. For, with the new Tioga Road, which, through the generosity of Mr. Stephen T. Mather and a few others, the Government has acquired, there is to be revealed a new Yosemite which only John Muir and others of similar bent have seen. This is a Yosemite far different from the quiet, incomparable valley. It is a land of forests, snow, and glaciers. From

Mount Lyell one looks, as from an island, upon a tumbled sea of snowy peaks. Its lakes, many of which have never been fished, are alive with trout. And through it foams the Tuolumne River, a water spectacle destined to world celebrity.

A new hotel, accompanied by adequate camping facilities, has been built on a shoulder of Mount Rainier, in Paradise Valley; and roads are projected to open up the northern side of this wonderful ice mountain. New roads and trails are building in the Glacier National Park, and new hotels are projected to make accessible portions of this scenic wilderness of incomparable magnificence.

While as the years have passed we have been modestly developing the superb scenic possibilities of the Yellowstone, nature has made of it the largest and most populous game preserve in the Western Hemisphere. Its great size, its altitude, its vast wildernesses, its plentiful waters, its favorable conformation of rugged mountain and sheltered valley, and the nearly perfect protection afforded by the policy and the scientific care of the Government have made this park, since its inauguration in 1872, the natural and inevitable center of game conservation for this Nation. There is something of significance in this. It is the destiny of the national parks, if wisely controlled, to become the public laboratories of nature study for the Nation. And from them specimens may be distributed to the city and State preserves, as is now being done with the elk of the Yellowstone, which are too abundant, and may be done later with the antelope.

If Congress will but make the funds available for the construction of roads over which automobiles may travel with safety (for all the parks are now open to motors) and for trails to hunt out the hidden places of beauty and dignity, we may expect that year by year these parks will become a more precious possession of the people, holding them to the further discovery of America and making them still prouder of its resources, esthetic as well as material.

FRANKLIN K. LANE,
Secretary of the Interior.

PRESENTATION

THIS Nation is richer in natural scenery of the first order than any other nation; but it does not know it. It possesses an empire of grandeur and beauty which it scarcely has heard of. It owns the most inspiring playgrounds and the best equipped nature schools in the world and is serenely ignorant of the fact. In its national parks it has neglected, because it has quite overlooked, an economic asset of incalculable value.

The Nation must awake, and it now becomes our happy duty to waken it to so pleasing and profitable a reality. This portfolio is the morning call to the day of realization.

Individual features of several of our national parks are known the world over; but few to whom the Yosemite Valley is a household word know that its seven wonderful miles are a part of a scenic wonderland of eleven hundred square miles called the Yosemite National Park. So with the Yellowstone; all have heard of its geysers, but few indeed of its thirty-three hundred square miles of wilderness beauty. Some of the finest of our national parks here pictured you probably have never even heard of. The Sequoia National Park, a hundred miles south of the Yosemite, one of the noblest scenic areas in the world, is the home of more than a million sequoias, the celebrated Big Trees of California; but even its name is known to few. The Crater Lake National Park encloses the deepest and bluest lake in the world surrounded by walls of pearly fretted lavas of indescribable beauty—a very wonder spot; but it is probably least known of all.

The main object of this portfolio, therefore, is to present to the people of this country a panorama of our national parks and national monuments set side by side for their study and comparison. Each park will be found highly individual. The whole will be a revelation.

This is the first really representative presentation of American scenery of grandeur ever published, perhaps ever made. The selection is from photographs collected during a period of many months from all available sources, and represents the most striking work of many photographers.

The portfolio is dedicated to the American people. It is my great hope that it will serve to turn the busy eyes of this Nation upon its national parks long enough to bring some realization of what these pleasure gardens ought to mean, of what so easily they may be made to mean, to this people.

STEPHEN T. MATHER,

Director, National Park Service.

NOTE TO SECOND EDITION

THE first edition of the National Parks Portfolio, which numbered 275,000 copies, was issued by the Department of the Interior in June, 1916. The second edition, brought up to date by the substitution of later photographs and enlarged by the addition of the Hot Springs Section, is one of the first publications of the new National Park Service, which Congress created August 25, 1916.

Acknowledgments are due to the many photographers, professional and amateur, who contributed some of the best examples of their work to this Portfolio; to the United States Geological Survey for assistance and hearty cooperation; to many helpful individuals; and to seventeen Western railroads, whose contribution of forty-three thousand dollars made possible its first publication.

ANTELOPE

THE LAND *of* WONDERS

THE Yellowstone National Park is the largest and most widely celebrated of our national parks. It is a wooded wilderness of thirty-three hundred square miles. It contains more geysers than are found in the rest of the world together. It has innumerable boiling springs whose steam mingles with the clouds.

It has many rushing rivers and large lakes. It has waterfalls of great height and large volume. It has fishing waters unexcelled.

It has canyons of sublimity, one of which presents a spectacle of broken color unequalled. It has areas of petrified forests with trunks standing. It has innumerable wild animals which have ceased unduly to fear man; in fact, it is unique as a bird and animal sanctuary.

It has great hotels and many public camps. It has two hundred miles of excellent roads.

In short, it is not only the wonderland that common report describes; it is also the fitting playground and pleasure resort of a great people; it is also the ideal summer school of nature study.

CREST OF THE LOWER FALLS

THREEFOLD PERSONALITY

THE Yellowstone is associated in the public mind with geysers only. Thousands even of those who, watches in hand, have hustled from sight to sight over the usual stage schedules, bring home vivid impressions of little else.

There never was a greater mistake. Were there no geysers, the Yellowstone watershed alone, with its glowing canyon, would be worth the national park. Were there also no canyon, the scenic wilderness and its incomparable wealth of wild-animal life would be worth the national park.

The personality of the Yellowstone is threefold. The hot-water manifestations are worth minute examination, the canyon a contemplative visit, the park a summer. Dunraven Pass, Mount Washburn, the canyon at Tower Falls, Shoshone Lake, Sylvan Pass—these are known to very few indeed. See all or you have not seen the Yellowstone.

THE NORRIS GEYSER BASIN

GEYSERS SPOUT AND STEAMING VAPORS RISE

THE first view of the geyser basins affords a sensation never to be forgotten. Early explorers imagined they smelled brimstone. Early lecturers were hissed and sometimes even stoned in the streets as imposters. Certainly the imaginative beholder acquires thrills he never before experienced.

There are more than forty geysers accessible in the three large basins on the west side. Some spout every few seconds, some every few minutes, others at intervals of hours or days, a few at irregular intervals of weeks. The eruptions vary from several feet to two hundred and fifty feet.

But the whole region bubbles and hisses and steams.

ELECTRIC PEAK, A SUPERB LANDMARK OF THE NORTH SIDE

MANY-COLORED CANYON

FROM Inspiration Point, looking a thousand feet almost vertically down upon the foaming Yellowstone River, and southward three miles to the Great Falls, the hushed observer sees spread before him the most glorious kaleidoscope of color he will ever see in nature. The steep slopes are inconceivably carved by the frost and the erosion of the ages. Sometimes they lie in straight lines at easy angles, from which jut high rocky prominences. Sometimes they seem carved from the side walls. Here and there jagged rocky needles rise perpendicularly like groups of gothic spires.

And the whole is colored as brokenly and vividly as the field of a kaleidoscope. The whole is streaked and spotted in every shade from the deepest orange to the faintest lemon, from deep crimson through all the brick shades to the softest pink, from black through all the grays and pearls to glistening white. The greens are furnished by the dark pines above, the lighter shades of growth caught here and there in soft masses on the gentler slopes and the foaming green of the plunging river so far below. The blues, ever changing, are found in the dome of the sky overhead.

DEER MAKE UNEXPECTED SILHOUETTES AT FREQUENT INTERVALS

GREATEST ANIMAL REFUGE

THE Yellowstone National Park is by far the largest and most successful wild-animal preserve in the world. Since it was established in 1872 hunting has been strictly prohibited, and elk, bear, deer of several kinds, antelope, bison, moose, and bighorn mountain sheep roam the valleys and mountains in large numbers. Thirty thousand elk, for instance, live in the park. Antelope, nearly extinct elsewhere, here abound.

These animals have long since ceased to fear man as wild animals do everywhere except in our national parks. While few tourists see them who follow the beaten roads in the everlasting sequence of stages, those who linger in the glorious wilderness see them in an abundance that fairly astonishes.

ANIMALS REALLY AT HOME

Photograph by Edward S. Curtis

UNLIKE THE GRIZZLY, THE BROWN BEAR CLIMBS TREES QUICKLY AND EASILY

VERY different, indeed, from the beasts of the after-dinner story and the literature of adventure are the wild animals of the Yellowstone. Never shot at, never pursued, they are comparatively as fearless as song-birds nestling in the homestead trees.

Wilderness bears cross the road without haste a few yards ahead of the solitary passer-by, and his accustomed horses jog on undisturbed. Deer by scores lift their antlered heads above near thickets to watch his passing. Elk scarcely slow their cropping of forest grasses. Even the occasional moose, straying far from his southern wilderness, scarcely quickens his long lope. Herds of antelope on near-by hills watch but hold their own.

Only the grizzly and the mountain sheep, besides the predatory beasts, still hide in the fastnesses. But even the mountain sheep loses fear and joins the others in winters of heavy snow when park rangers scatter hay by the roadside.

Photograph by S. N. Leek

THE PARADISE OF ANGLERS

THE Yellowstone is a land of splendid rivers. Three watersheds find their beginnings within its borders. From Yellowstone Lake flows north the rushing Yellowstone River with its many tributaries; from Shoshone, Lewis, and Heart Lakes flows south the Snake River; and in the western slopes rise the Madison and its many tributaries. All are trout waters of high degree.

The native trout of this region is the famous cutthroat. The grayling is native in the Madison River and its tributaries. Others have been planted.

Besides the stream fishing, which is unsurpassed, the lakes, particularly Shoshone Lake and certain small ones, afford admirable sport.

THE LAKE HOTEL

THREE OF THE FIVE LARGE HOTELS IN THE YELLOWSTONE NATIONAL PARK

Photograph by Shiplers, Salt Lake City

THERE ARE ALSO LARGE PUBLIC CAMPS

LIVING *in the* YELLOWSTONE

THE park has entrances on all four sides. Three have railroad connections; the southern entrance, by way of Jackson Hole and past the jagged snowy Tetons, is available for vehicles. The roads from all entrances enter a central belt road which makes a large circuit connecting places of special interest.

Four large hotels are located at points convenient for seeing the sights, and are supplemented by public camps at modest prices.

But the day of the unhurried visitor has dawned. If you want to enjoy your Yellowstone, if, indeed, you want even to *see* it, you should make your minimum twice five days; two weeks is better; a month is ideal.

Spend the additional time at the canyon and on the trails. See the lake and the pelicans. Fish in Shoshone Lake. Climb Mount Washburn. Spend a day at Tower Falls. See Mammoth Hot Springs. Hunt wild animals with a camera. Stay with the wilderness and it will repay you a thousandfold. Fish a little, study nature in her myriad wealth—and live.

The Yellowstone National Park is ideal for camping out. When people realize this it should quickly become one of the most lived in, as it already is one of the most livable, of all our national parks.

THE SOUTH ENTRANCE IS NEAR THE LORDLY TETON RANGE, JUST OVER THE BOUNDARY

THE NATIONAL PARKS AT A GLANCE

Number, 17; Total Area, 9,774 Square Miles. Arranged chronologically in the order of their creation.

NATIONAL PARK and Date	LOCATION	AREA in square miles	DISTINCTIVE CHARACTERISTICS
HOT SPRINGS RES- ERVATION 1832	Middle Arkansas	1½	46 hot springs possessing curative properties—Many hotels and boarding houses in adjacent city of Hot Springs—Bathhouses under public control.
YELLOWSTONE 1872	North- western Wyoming	3,348	More geysers than in all rest of world together—Boiling springs—Mud volcanoes—Petrified forests—Grand Canyon of the Yellowstone, remarkable for gorgeous coloring—Large lakes and waterfalls—Vast wilderness inhabited by deer, elk, bison, moose, antelope, bear, mountain sheep, etc.; greatest wild bird and animal preserve in world.
YOSEMITE 1890	Middle eastern California	1,125	Valley of world-famed beauty—Lofty cliffs—Romantic vistas—Waterfalls of extraordinary height—3 groves of big trees—Large areas of snowy peaks—Waterwheel falls.
SEQUOIA 1890	Middle eastern California	252	The Big Tree National Park—12,000 sequoia trees over 10 feet in diameter, some 25 to 36 feet in diameter.
GENERAL GRANT 1890	Middle California	4	Created to preserve the celebrated General Grant Tree, 35 feet in diameter—6 miles from Sequoia National Park.
MOUNT RAINIER 1899	West central Washington	324	Largest accessible single-peak glacier system—28 glaciers, some of large size—48 square miles of glacier, 50 to 1,000 feet thick—Remarkable subalpine wild-flower fields.
CRATER LAKE 1902	Southern Oregon	249	Lake of extraordinary blue in crater of extinct volcano, no visible inlet, or outlet—Sides 1,000 feet high.
PLATT 1904	Southern Oklahoma	1½	Sulphur and other springs possessing curative properties—Under Government regulation.
MESA VERDE 1906	Southern Colorado	77	Most notable and best-preserved prehistoric cliff dwellings in United States, if not in the world.
GLACIER 1910	North- western Montana	1,534	Rugged mountain region of unsurpassed alpine character—250 glacier-fed lakes of romantic beauty—60 small glaciers—Peaks of unusual shape—Precipices thousands of feet deep—Fine trout fishing.
ROCKY MOUNTAIN 1915	Northern Colorado	398	Heart of the Rockies—Snowy Range, peaks 11,000 to 14,250 feet altitude—Remarkable records of glacial period.
HAWAII 1916	Hawaii	118	Two active volcanoes, Mauna Loa, largest in the world, and Kilauea, whose lake of bubbling lava is world famed—A third volcano, Haleakala, whose crater, 8 miles wide, contains many cones.
LASSEN VOLCANIC 1916	Northern California	124	Active volcano—Lassen Peak, 10,437 feet in altitude—Cinder Cone, 6,907 feet—Hot springs—Mud geysers.
MOUNT MCKINLEY 1917	South central Alaska	2,200	Highest Mountain in North America—Rises higher above surrounding country than any mountain in the world.

National Parks of less popular interest are:

Casa Grande Ruin, 1889, Arizona.....	Prehistoric Indian ruin.
Wind Cave, 1903, South Dakota.....	Large natural cavern.
Sullys Hill, 1904, North Dakota.....	Wooded hilly tract on Devils Lake.

HOW TO REACH THE NATIONAL PARKS

The map shows the location of all of our National Parks and their principal railroad connections. The traveler may work out his routes to suit himself. Low round-trip excursion fares to the American Rocky Mountain region and Pacific Coast may be availed of in visiting the National Parks during their respective seasons, thus materially reducing the cost of the trip. Transcontinental through trains and branch lines make the Parks easy of access from all parts of the United States. For schedules and excursion fares to and between the National Parks apply to your local railway ticket office or to any excursion agency, or write to the Passenger Departments of the railroads which appear on the above map, as follows:

ARIZONA EASTERN RAILROAD	Tucson, Ariz.
ATCHISON, TOPEKA & SANTA FE RAILWAY	1119 Railway Exchange, Chicago, Ill.
CHICAGO & NORTH WESTERN RAILWAY	225 West Jackson Boulevard, Chicago, Ill.
CHICAGO, BURLINGTON & QUINCY RAILROAD CO.	547 West Jackson Boulevard, Chicago, Ill.
CHICAGO, MILWAUKEE & ST. PAUL RAILWAY	Railway Exchange, Chicago, Ill.
CHICAGO, ROCK ISLAND & PACIFIC RAILWAY CO.	La Salle Street Station, Chicago, Ill.
COLORADO & SOUTHERN RAILWAY	Railway Exchange Building, Denver, Colo.
DENVER & RIO GRANDE RAILROAD CO.	Equitable Building, Denver, Colo.
GREAT NORTHERN RAILWAY	Railroad Building, Fourth and Jackson Streets, St. Paul, Minn.
GULF, COLORADO & SANTA FE RAILWAY	Galveston, Tex.
ILLINOIS CENTRAL RAILROAD	Central Station, Chicago, Ill.
MISSOURI PACIFIC RAILWAY	Railway Exchange Building, St. Louis, Mo.
NORTHERN PACIFIC RAILWAY	Railroad Building, Fifth and Jackson Streets, St. Paul, Minn.
SAN PEDRO, LOS ANGELES & SALT LAKE RAILROAD	Pacific Electric Building, Los Angeles, Cal.
SOUTHERN PACIFIC CO.	Flood Building, San Francisco, Cal.
UNION PACIFIC SYSTEM	Garland Building, 58 East Washington Street, Chicago, Ill.
WABASH RAILWAY	Railway Exchange Building, St. Louis, Mo.
WESTERN PACIFIC RAILWAY	Mills Building, San Francisco, Cal.

For information about sojourning and traveling within the National Parks write to the Department of the Interior for the Information circular of the Park or Parks in which you are interested.

THE HIGHEST WATERFALL IN THE WORLD—THE YOSEMITE FALLS

The Upper Fall measures 1,430 feet, as high as nine Niagaras. The Lower Fall measures 320 feet. The total drop from crest to river, including intermediate cascades, is almost half a mile

THE YOSEMITE VALLEY FROM INSPIRATION POINT, SHOWING BRIDALVEIL FALLS

LAND *of* ENCHANTMENT

WHO does not know of the Yosemite Valley? And yet, how few have heard of the Yosemite National Park! How few know that this world-famous, incomparable Valley is merely a crack seven miles long in a scenic masterpiece of eleven hundred square miles!

John Muir loved the Valley and crystallized its fame in phrase.

But still more he loved the National Park, which he describes as including "innumerable lakes and waterfalls and smooth silky lawns; the noblest forests, the loftiest granite domes, the deepest ice-sculptured canyons, the brightest crystalline pavements, and snowy mountains soaring into the sky twelve and thirteen thousand feet, arrayed in open ranks and spiry-pinnacled groups partially separated by tremendous canyons and amphitheatres; gardens on their sunny brows, avalanches thundering down their long white slopes, cataracts roaring gray and foaming in the crooked rugged gorges, and glaciers in their shadowy recesses working in silence, slowly completing their sculptures; new-born lakes at their feet, blue and green, free or encumbered with drifting icebergs like miniature Arctic Oceans, shining, sparkling, calm as stars."

THE YOSEMITE VALLEY FROM GLACIER POINT

The Upper and Lower Yosemite Falls are here shown in partial profile

BEAUTIFUL VERNAL FALLS

THE first view of most spots of unusual celebrity often falls short of expectation, but this is seldom, if ever, true of the Yosemite Valley. The sheer immensity of the precipices on either side of the peaceful floor; the loftiness and the romantic suggestion of the numerous waterfalls; the majesty of the granite walls; and the unreal, almost fairy quality of the ever-varying whole can not be successfully foretold.

This valley was once a tortuous river canyon. So rapidly was it cut by the Merced that the tributary valleys soon remained hanging high on either side. Then the canyon became the bed of a great glacier. It was widened as well as deepened, and the hanging character of the side valleys was accentuated.

This explains the enormous height of the waterfalls.

The Yosemite Falls, for instance, drops 1,430 feet in one sheer fall, a height equal to nine Niagara Falls piled one on top of the other. The Lower Yosemite Fall, immediately below, has a drop of 320 feet, or two Niagaras more. Vernal Falls has the same height. The Nevada Falls drops 594 feet sheer, and the celebrated Bridalveil Falls 620 feet. Nowhere else in the world may be had a water spectacle such as this.

THE GRIZZLY GIANT, THE BIGGEST
YOSEMITE SEQUOIA

SUMMER in the Yosemite is unreal. The Valley, with its foaming falls dissolving into mists, its calm forests hiding the singing river, its enormous granites peaked and domed against the sky, its inspiring silence haunted by distant water, suggests a dream. One has a sense of fairyland and the awe of infinity.

Imagine Cathedral Rocks rising twenty-six hundred feet above the wild flowers, El Capitan thirty-six hundred feet, Sentinel Dome four thousand feet, Half Dome five thousand feet, and Clouds Rest six thousand feet! And among them, the waterfalls!

Even the weather appears impossible; the summers are warm, but not too warm; dry, but not too dry; the nights cold and marvelously starry.

A few miles away are the Big Trees, not the greatest groves nor the greatest trees, for those are in the Sequoia National Park, a hundred miles south, but three groves containing monsters which, next to Sequoia's, are the hugest and the oldest living things. Of these the Grizzly Giant is king—whose diameter is nearly thirty feet, whose girth is over ninety-nine, and whose height is more than two hundred. Their presence commands the silence due to worship.

Winter is becoming a feature in the life of the Valley. Hotels are open to accommodate an increasing flow of visitors. The falls are still and frozen, the trees laden with snowy burdens. The greens have vanished; the winter sun shines upon a glory of gray and white.

Winter sports are rapidly becoming popular on the floor of the Valley.

WHO'S COMING?

Copyrighted, 1910, by J. T. Boysen

WOOF!

LIVING is comfortable in the Yosemite. Several roomy public camps, and a fine hotel offer the visitor to the Valley a choice of kind and price. Above the Valley lodges and most comfortable camps occur at convenient intervals on road and trail. There is a new hotel on Glacier Point.

These improved conditions begin the larger development of the Yosemite National Park which the Department of the Interior has planned so long and so carefully. It has there inaugurated a model policy for all the national parks. The Yosemite is reached from Merced.

The Yosemite is an excellent place to camp out. One may have choice of many kinds of mountain country. Nearly everywhere the trout fishing is exceptionally fine. Camping outfits may be rented and supplies purchased in the Valley. Garages for motorists and rest-houses for trampers will be found at convenient intervals.

TIOGA ROAD

ABOVE the north rim of the valley the old Tioga Road, which the Department of the Interior acquired in 1915 and put into good condition, crosses the park from east to west, affording a new route across the Sierra and opening to the public for the first time the magnificent scenic region in the north.

The Tioga Road was built in 1881 to a mine soon after abandoned. For years it has been impassable. It is now the gateway to a wilderness heretofore accessible only to campers.

NORTH OF THE VALLEY'S RIM

BEFORE the restored Tioga Road made accessible the magnificent mountain and valley area constituting the northern half of the Yosemite National Park, this pleasure paradise was known to none except a few enthusiasts who penetrated its wilderness year after year with camping outfits.

This is the region of rivers and lakes and granite domes and brilliantly polished glacial pavements. The mark of the glacier is seen on every hand.

It is the region of small glaciers, remnants of a gigantic past, of which there are several in the park. It is the region of rock-bordered glacier lakes of which there are more than two hundred and fifty. It is the region, above all, of small, rushing rivers and of the roaring, foaming, twisting Tuolumne.

From the base of the Sierra crest, born of its snows, the Tuolumne River rushes westward roughly paralleling the Tioga Road. Midway it slants sharply down into the Tuolumne Canyon forming in its mad course a water spectacle destined some day to world fame.

MAD WATERS *of* TUOLUMNE

NONE but the hardiest climbers have clambered down the Grand Canyon of the Tuolumne and seen its leaping waters.

Here the river, slanting sharply, becomes, in John Muir's phrase, "one wild, exulting, onrushing mass of snowy purple bloom spreading over glacial waves of granite without any definite channel, gliding in magnificent silver plumes, dashing and foaming through huge boulder dams, leaping high in the air in wheellike whirls, displaying glorious enthusiasm, tossing from side to side, doubling, glinting, singing in exuberance of mountain energy."

Photograph by A. C. Pillsbury

A PAIR OF TUOLUMNE WATERWHEELS

THE EVERLASTING SNOWS

SUMMITS of perpetual snow are, for most Americans, a new association with Yosemite. But the region's very origin was that Sierra whose crest peaks on the park's eastern boundary still shelter in shrunken old age the once all-powerful glaciers.

Excelsior, Conness, Dana, Kuna, Blacktop, Lyell, Long—from the companionship of these great peaks descended the ice-pack of old and descend to-day the sparkling waters of the Tuolumne and the Merced.

From their great summits the climber beholds a sublime wilderness of crowded, towering mountains, a contrast to the silent, uplifting Valley as striking as mind can conceive. Everlasting snows fill the hollows between the peaks and spatter their jagged granite sides. The glaciers feed innumerable small lakes.

HOW TO REACH THE NATIONAL PARKS

The map shows the location of all of our National Parks and their principal railroad connections. The traveler may work out his routes to suit himself. Low round-trip excursion fares to the American Rocky Mountain region and Pacific Coast may be availed of in visiting the National Parks during their respective seasons, thus materially reducing the cost of the trip. Transcontinental through trains and branch lines make the Parks easy of access from all parts of the United States. For schedules and excursion fares to and between the National Parks apply to your local railway ticket office or to any excursion agency, or write to the Passenger Departments of the railroads which appear on the above map, as follows:

ARIZONA EASTERN RAILROAD	Tucson, Ariz.
ATCHISON, TOPEKA & SANTA FE RAILWAY	1119 Railway Exchange, Chicago, Ill.
CHICAGO & NORTH WESTERN RAILWAY	226 West Jackson Boulevard, Chicago, Ill.

IT IS THE IDEAL PARK FOR CAMPING

LAND OF GIANT TREES

NATURE'S forest masterpiece is John Muir's designation of the giant tree after which is named the Sequoia National Park in middle eastern California. Here, within an area of two hundred and thirty-seven square miles, are found several large groves of the celebrated *Sequoia Washingtoniana*, popularly known and widely celebrated as the Big Tree of California.

More than a million of these trees grow within the park's narrow confines, many of them mere babes of a few hundred years, many sturdy youths of a thousand years, many in the young vigor of two or three thousand years, and a few in full maturity. The principal entrance is Visalia, California.

Half a dozen miles away is the General Grant National Park, whose four square miles were set apart because they contained the General Grant Tree, second only in size and age to the patriarch of all, the General Sherman Tree.

On Sequoia's favored slopes grow other monsters also. It is the park of magnificent trees of many kinds, and it is the park of birds.

The Sequoia National Park is the gateway to one of the grandest scenic areas in this or any other land. Over its borders to the north and east lies a land of sublime nobility whose wild rivers and tortuous canyons, whose glacier-carved precipices and vast snowy summits culminating in the supreme altitude of Whitney, will make it some day surpassed in celebrity by none.

THE BIGGEST THING ALIVE

Photograph by Lindley Eddy

THE GENERAL SHERMAN TREE

The largest and oldest living thing in all the world

OF the 1,156,000 sequoia trees, old and young, which form these groves, twelve thousand exceed ten feet in diameter. Muir states that a diameter of twenty feet and a height of two hundred and seventy-five is perhaps the average for mature and favorably situated trees, while trees twenty-five feet in diameter and approaching three hundred in height are not rare.

But the greatest trees have astonishing dimensions:

General Sherman: diameter, 36.5 feet; height, 279.9 feet.

General Grant: diameter, 35 feet; height, 264 feet.

Abraham Lincoln: diameter, 31 feet; height, 270 feet.

California: diameter, 30 feet; height, 260 feet.

George Washington: diameter, 29 feet; height, 255 feet.

A little effort will help you realize these dimensions. Measure and stake in front of a church the diameter of the General Sherman Tree. Then stand back a distance equal to the tree's height. Raise your eyes slowly and imagine this huge trunk rising in front of the church. When you reach a point in the sky forty-five degrees up from the spot on which you stand you will have the tree's height were it growing in front of your church.

THE OLDEST THING ALIVE

THE General Sherman Tree is the oldest living thing. At the birth of Moses it was probably a sapling. Its exact age can not be determined without counting the rings, but it is probably in excess of thirty-five hundred years. This looks back long before the beginning of human history. When Christ was born it was a lusty youth of fifteen hundred summers.

There are many thousands of trees in the Sequoia National Park which were growing thriftily when Christ was born; hundreds which were flourishing while Babylon was in its prime; several which antedated the pyramids on the Egyptian desert.

John Muir counted four thousand rings on one prostrate giant. This tree probably sprouted while the Tower of Babel was still standing.

The sequoia is regular and symmetrical in general form. Its powerful, stately trunk is purplish to cinnamon brown and rises without a branch a hundred or a hundred and fifty feet—which is as high or higher than the tops of most forest trees. Its bulky limbs shoot boldly out on every side. Its foliage, the most feathery and delicate of all the conifers, is densely massed.

The wood is almost indestructible except by fire.

"DEEP IN THE WOODY WILDERNESS"

WILDERNESS OF MONSTERS

PERSONS who have seen the Mariposa Grove in the Yosemite National Park have seen sequoias of the noblest type; but only in the Giant Forest of the Sequoia National Park will they see them in the impressive glory of massed multitude and wildest grandeur. To walk and wonder through these woods, even for a few hours, is to feel an emotion which can be duplicated nowhere else.

It is not the sequoias alone, as in the Mariposa Grove, that stir the soul, but the bewildering and climatic repetition of monsters rising singly and superbly grouped from a dense and seemingly endless forest of noble growths of many other kinds.

Without the sequoias this forest would be notable. With their constant unexpected repetition the effect is dramatic, even breath-taking. Many of the very greatest trees are happened upon casually as the visitor winds through the bush-grown aisles of pine, and their sudden appearance is the more dramatic because of the freedom of their red pillared stems from the bright green flowing moss upon the trunks and branches of the uncountable pines.

Until July, 1916, when Congress appropriated \$50,000 for the purchase of a part of the private holdings in the Giant Forest, it was our national misfortune and peril that most of these monster trees remained the property of individuals. The balance of the property was purchased for \$20,000 by the National Geographic Society and donated to the United States.

AN AGED JUNIPER

Sequoia is the park of big trees of many kinds, and it is the park of birds

"THE GREATER SEQUOIA"

ONE can not think or speak of the Sequoia National Park without including the extraordinary scenic country lying beyond its boundaries to the north and east. Not that there is much in common between the two, for the park marks the supremacy of forest luxuriance and the outlying country the supremacy of rock-sculptured canyon and snowy summit.

And yet there is the common note of supremacy, each of its own kind.

And there is the common note of continuity, for, from the lowest valley of the wooded park to the peak of our loftiest height, Mount Whitney, nature's painting runs the gamut. The parts are indivisible; to separate them is to cut in two the canvas of the Master.

And so it is that those who know this land of exuberant climax have come to call it "The Greater Sequoia" in order to express not the part limited by the park's official title but the whole as God made it.

There is a bill now before Congress to enlarge the park boundaries so that they shall inclose it all.

GRAND SENTINEL, TOWERING 3,500 FEET ABOVE THE RIVER, IS ONE OF THE FEATURES OF
KINGS RIVER CANYON

KINGS AND KERN CANYONS

WELL outside the park's boundaries and overlooking it from the east the amazing, craggy Sierra gives birth in glacial chambers to two noble rivers. A hundred thousand rivulets trickle from the everlasting snows; ten thousand resultant brooks roar down the rocky slopes; hundreds of resultant streams swell their turbulent, trout-haunted currents.

One of these rivers, the Kings, flows west, paralleling the northern boundary of the park. The other, the Kern, flows south, paralleling its eastern boundary.

The Kings River Canyon and the Canyon of the Kern are practically matchless for the wild quality of their beauty and the majesty of their setting. The traveler goes home to plan his return, for this is a country whose peculiar charm lays an enduring clutch upon desire. "The Greater Sequoia" has few visitors yet—but they are worshipers.

Unlike many areas of extreme rocky character, this is not specially difficult to travel; it curiously adapts itself to trails. It is an ideal land for the camper. But one must go well equipped. There must be good guides, good horses, and plenty of warm clothing. The difference here between a good and an indifferent equipment is the difference between satisfaction and misery.

SUMMIT OF TABLE MOUNTAIN

SIERRA'S CREST *and* OUR LOFTIEST MOUNTAIN

THE Sierra reaches its mightiest climax a few miles east of the present Sequoia National Park in Mount Whitney, the highest mountain in the United States. No towering, isolated summit is Whitney, like Mount Rainier and Longs Peak, but literally a climax; for here the Sierra has massed her mountains, tumbled them willfully, recklessly, into one sprawling, titanic heap, as though this were the dumping ground for all left over after the making of America.

The effect is imposing, breathless, overwhelming.

Out of this mass emerges one higher than the rest. That is Mount Whitney. Its altitude is 14,501 feet.

The journey to Whitney summit is a progress of inspiration and climax. From Visalia automobiles carry you under the very shadows of the Big Trees. From there it is a matter of horseback and pack train. Over the park boundaries into the magic of the mountains; up the headwaters of the Kaweah; across the splendors of the Great Western Divide; into and over the Kern; then up, up, up, threading passes, skirting precipices, edging glaciers, to the top.

Photograph by Mark Daniels

NO TOWERING, ISOLATED SUMMIT IS MOUNT WHITNEY, LIKE MOUNT RAINIER AND LONGS PEAK, BUT LITERALLY A CLIMAX. OUT OF THE MASS EMERGES ONE HIGHER THAN THE REST; THAT IS ALL

ENTRANCE TO MOUNT RAINIER NATIONAL PARK

THE FROZEN OCTOPUS

FROM the Cascade Mountains in Washington rises a series of volcanoes which once blazed across the sea like giant beacons. To-day, their fires quenched, they suggest a stalwart band of Knights of the Ages, helmeted in snow, armored in ice, standing at parade upon a carpet patterned gorgeously in wild flowers.

Easily chief of this knightly band is Mount Rainier, a giant towering 14,408 feet above tidewater in Puget Sound. Home-bound sailors far at sea mend their courses from his silver summit.

This mountain has a glacier system far exceeding in size and impressive beauty that of any other in the United States. From its snow-covered summit twenty-eight rivers of ice pour slowly down its sides. Seen upon the map, as if from an aeroplane, one thinks of it as an enormous frozen octopus stretching icy tentacles down upon every side among the rich gardens of wild flowers and splendid forests of firs and cedars below.

EVERYWHERE, BETWEEN AND TOUCHING THE Icy GLACIER FINGERS, ARE GORGEOUS GARDENS OF LUXURIANT WILD FLOWERS

“As if Nature,” writes John Muir, “glad to make an open space between woods so dense and ice so deep, were economizing the precious ground”

Photograph by Curtis & Miller

LOOKING INTO A GREAT CREVASSE IN THE STEVENS GLACIER

Crevasses are caused by the swifter motion of the middle than the sides. This ice is 400 feet deep

THE GIANT RIVERS OF ICE

EVERY winter the moisture-laden winds from the Pacific, suddenly cooled against its summit, deposit upon Rainier's top and sides enormous snows. These, settling in the mile-wide crater which was left after a great explosion in some prehistoric age carried away perhaps two thousand feet of the volcano's former height, press with overwhelming weight down the mountain's sloping sides.

Thus are born the glaciers, for the snow under its own pressure quickly hardens into ice. Through twenty-eight valleys, self-carved in the solid rock, flow these rivers of ice, now turning, as rivers of water turn, to avoid the harder rock strata, now roaring over precipices like congealed water falls, now rippling, like water currents, over rough bottoms, pushing, pouring relentlessly on until they reach those parts of their courses where warmer air turns them into rivers of water.

There are forty-eight square miles of these glaciers.

LEAVING CAMP OF THE CLOUDS FOR THE SUMMIT

Nearly every day parties start for the long hard tramp up the glaciers to Columbia Crest. The climbers must dress warmly, paint their faces and hands to protect the skin from sunburn, and eat sparingly. Dark glasses must be worn. None but the hardy mountain climbers attempt this arduous tramp.

IN AN ARCTIC WONDERLAND

MOUNT RAINIER is nearly three miles high measured from sea level. It rises nearly two miles from its immediate base. Once it was a finished cone like the famous Fujiyama, the sacred mountain of Japan. Then it was probably 16,000 feet high. Indian legends tell of the great eruption.

In addition to the twenty-eight named glaciers there are others yet unnamed and little known. Few visitors have seen the wonderful north side, a photograph of which will be found on a later page. It possesses endless possibilities for development and easy grades to Columbia Crest, the wonderful snow-covered summit which is the second highest summit in the United States.

Many interesting things might be told of the glaciers were there space. For example, several species of minute insects live in the ice, hopping about like tiny fleas. They are harder to see than the so-called sand fleas at the seashore because much smaller. Slender, dark-brown worms live in countless millions in the surface ice. Microscopic rose-colored plants also thrive in such great numbers that they tint the surface here and there, making what is commonly called "red snow."

INTING GROUND, GLISTENING AGAINST THE SKY AND PICTURED AGAIN IN MIRROR LAKE

GLACIER AND WILD FLOWER

PROBABLY no glacier of large size in the world is so quickly, easily, and comfortably reached as the most striking and celebrated, though by no means the largest, of Mount Rainier's, the Nisqually Glacier. It descends directly south from the snowy summit in a long curve, its lower finger reaching into parklike glades of luxuriant wild flowers. From Paradise Park one may step directly upon its fissured surface.

The Nisqually Glacier is five miles long and, at Paradise Park, is half a mile wide. Glistening white and fairly smooth at its shining source on the mountain's summit, its surface here is soiled with dust and broken stone and squeezed and rent by terrible pressure into fantastic shapes. Innumerable crevasses, or cracks many feet deep, break across it caused by the more rapid movement of the glacier's middle than its edges; for glaciers, like rivers of water, develop swifter currents nearer midstream.

Professor Le Conte tells us that the movement of Nisqually Glacier in summer averages, at midstream, about sixteen inches a day. It is far less at the margins, its speed being retarded by the friction of the sides.

Like all glaciers, the Nisqually gathers on its surface masses of rock with which it strews its sides just as rivers of water strew their banks with rocks and floating débris. These are called lateral moraines, or side moraines. Sometimes glaciers build lateral moraines miles long. The Nisqually ice is four hundred feet thick in places.

The rocks which are carried in midstream to the end of the glacier and dropped when the ice melts are called the terminal moraine.

The end, or snout, of the glacier thus always lies among a great mass of rocks and stones. The Nisqually River generally flows from a cave in the end of the Nisqually Glacier's snout. The river is dark brown when it first appears because it carries sediment and powdered rock which, however, it soon deposits, becoming clear.

But this brief picture of the Mount Rainier National Park would miss its loveliest touch without some notice of the wild-flower parks lying at the base, and often reaching far up between the icy fingers, of Mount Rainier.

"Above the forests," writes John Muir, the celebrated naturalist, "there is a zone of the loveliest flowers, fifty miles in circuit and nearly two miles wide, so closely planted and luxurious that it seems as if nature, glad to make an open space between woods so dense and ice so deep, were economizing the precious ground and trying to see how many of her darlings she can get together in one mountain wreath—daisies, anemones, columbine, erythroniums, larkspurs, etc., among which we wade knee-deep and waist-deep, the bright corollas in myriads touching petal to petal. Altogether this is the richest subalpine garden I have ever found, a perfect flower elysium."

CRATER LAKE (UNFORTUNATELY NAMED) A NORTH-SIDE GEM OF BEAUTY

Photograph by Curtis & Miller

THE ROADS ARE ADMIRABLE

EASIEST GLACIERS TO SEE

THE Mount Rainier National Park is so accessible that one may get a brief close-by glimpse in one day. The new railroad slogan, "Four hours from Tacoma to the Glaciers," tells the story.

But no one unless under dire necessity should think of being so near one of the greatest spectacles in nature without sparing several days for a real look; several weeks is none too long. Thousands of Americans in normal years go to Switzerland to see glaciers much harder to reach and far less satisfactory to study.

An excellent road will carry the visitor by autostage from the railway terminus to the several comfortable hotels and camps, most of which are so located that the principal scenic points on the south side may be easily reached.

Pedestrians and horseback riders also follow trails through the gorgeous wild-flower parks, Paradise Valley, Indian Henrys Hunting Ground, Van Trump Park, Cowlitz Park, Ohanapecosh River and its hot springs, Summerland, Grand Park, Moraine Park, Elysian Fields, Spray Park, Natural Bridge, Cataract Basin, St. Andrews Park, Glacier Basin, and others; developing new points of view of wonderful glory.

NATIONAL PARK INN

THE NATIONAL PARKS AT A GLANCE

Number, 17; Total Area, 9,774 Square Miles. Arranged chronologically in the order of their creation.

NATIONAL PARK and Date	LOCATION	AREA in square miles	DISTINCTIVE CHARACTERISTICS
HOT SPRINGS RES- ERVATION 1832	Middle Arkansas	1 $\frac{1}{2}$	46 hot springs possessing curative properties—Many hotels and boarding houses in adjacent city of Hot Springs—Bathhouses under public control.
YELLOWSTONE 1872	North- western Wyoming	3,348	More geysers than in all rest of world together—Boiling springs—Mud volcanoes—Petrified forests—Grand Canyon of the Yellowstone, remarkable for gorgeous coloring—Large lakes and waterfalls—Vast wilderness inhabited by deer, elk, bison, moose, antelope, bear, mountain sheep, etc.; greatest wild bird and animal preserve in world.
YOSEMITE 1890	Middle eastern California	1,125	Valley of world-famed beauty—Lofty cliffs—Romantic vistas—Waterfalls of extraordinary height—3 groves of big trees—Large areas of snowy peaks—Waterwheel falls.
SEQUOIA 1890	Middle eastern California	252	The Big Tree National Park—12,000 sequoia trees over 10 feet in diameter, some 25 to 36 feet in diameter.
GENERAL GRANT 1890	Middle California	4	Created to preserve the celebrated General Grant Tree, 35 feet in diameter—6 miles from Sequoia National Park.
MOUNT RAINIER 1899	West central Washington	324	Largest accessible single-peak glacier system—28 glaciers, some of large size—48 square miles of glacier, 50 to 1,000 feet thick—Remarkable subalpine wild-flower fields.
CRATER LAKE 1902	Southern Oregon	249	Lake of extraordinary blue in crater of extinct volcano, no visible inlet, or outlet—Sides 1,000 feet high.
PLATT 1904	Southern Oklahoma	1 $\frac{1}{2}$	Sulphur and other springs possessing curative properties—Under Government regulation.
MESA VERDE 1906	Southern Colorado	77	Most notable and best-preserved prehistoric cliff dwellings in United States, if not in the world.
GLACIER 1910	North- western Montana	1,534	Rugged mountain region of unsurpassed alpine character—250 glacier-fed lakes of romantic beauty—60 small glaciers—Peaks of unusual shape—Precipices thousands of feet deep—Fine trout fishing.
ROCKY MOUNTAIN 1915	Northern Colorado	398	Heart of the Rockies—Snowy Range, peaks 11,000 to 14,250 feet altitude—Remarkable records of glacial period.
HAWAII 1916	Hawaii	118	Two active volcanoes, Mauna Loa, largest in the world, and Kilauea, whose lake of bubbling lava is world famed—A third volcano, Haleakala, whose crater, 8 miles wide, contains many cones.
LASSEN VOLCANIC 1916	Northern California	124	Active volcano—Lassen Peak, 10,437 feet in altitude—Cinder Cone, 6,007 feet—Hot springs—Mud geysers.
MOUNT MCKINLEY 1917	South central Alaska	2,200	Highest Mountain in North America—Rises higher above surrounding country than any mountain in the world.

National Parks of less popular interest are:

Casa Grande Ruin, 1889, Arizona.....Prehistoric Indian ruin.
Wind Cave, 1903, South Dakota.....Large natural cavern.
Sullys Hill, 1904, North Dakota.....Wooded hilly tract on Devils Lake.

HOW TO REACH THE NATIONAL PARKS

The map shows the location of all of our National Parks and their principal railroad connections. The traveler may work out his routes to suit himself. Low round-trip excursion fares to the American Rocky Mountain region and Pacific Coast may be availed of in visiting the National Parks during their respective seasons, thus materially reducing the cost of the trip. Transcontinental through trains and branch lines make the Parks easy of access from all parts of the United States. For schedules and excursion fares to and between the National Parks apply to your local railway ticket office or to any excursion agency, or write to the Passenger Departments of the railroads which appear on the above map, as follows:

ARIZONA EASTERN RAILROAD	Tucson, Ariz.
ATCHISON, TOPEKA & SANTA FE RAILWAY	1119 Railway Exchange, Chicago, Ill.
CHICAGO & NORTH WESTERN RAILWAY	225 West Jackson Boulevard, Chicago, Ill.
CHICAGO, BURLINGTON & QUINCY RAILROAD Co.	547 West Jackson Boulevard, Chicago, Ill.
CHICAGO, MILWAUKEE & ST. PAUL RAILWAY	Railway Exchange, Chicago, Ill.
CHICAGO, ROCK ISLAND & PACIFIC RAILWAY Co.	La Salle Street Station, Chicago, Ill.
COLORADO & SOUTHERN RAILWAY	Railway Exchange Building, Denver, Colo.
DENVER & RIO GRANDE RAILROAD Co.	Equitable Building, Denver, Colo.
GREAT NORTHERN RAILWAY	Railroad Building, Fourth and Jackson Streets, St. Paul, Minn.
GULF, COLORADO & SANTA FE RAILWAY	Central Station, Chicago, Ill.
ILLINOIS CENTRAL RAILROAD	Railway Exchange Building, St. Louis, Mo.
MISSOURI PACIFIC RAILWAY	Railroad Building, Fifth and Jackson Streets, St. Paul, Minn.
NORTHERN PACIFIC RAILWAY	Pacific Electric Building, Los Angeles, Cal.
SAN PEDRO, LOS ANGELES & SALT LAKE RAILROAD	Flood Building, San Francisco, Cal.
SOUTHERN PACIFIC Co.	Garland Building, 58 East Washington Street, Chicago, Ill.
UNION PACIFIC SYSTEM	Railway Exchange Building, St. Louis, Mo.
WABASH RAILWAY	Mills Building, San Francisco, Cal.
WESTERN PACIFIC RAILWAY	

For information about sojourning and traveling within the National Parks write to the Department of the Interior for the Information circular of the Park or Parks in which you are interested.

THE PHANTOM SHIP—STRANDED ON A MAGIC SHORE

THE LAKE OF MYSTERY

CRATER LAKE is the deepest and the bluest fresh-water lake in the world. It measures two thousand feet of solid water, and the intensity of its color is unbelievable even while you look at it. Its cliffs from sky line to surface average over a thousand feet high. It has no visible inlet or outlet, for it occupies the hole left when, in the dim ages before man, a volcano collapsed and disappeared within itself.

It is a gem of wonderful color in a setting of pearly lavas relieved by patches of pine green and snow white—a gem which changes hue with every atmospheric change and every shift of light.

There are crater lakes in other lands; in Italy, for instance, in Germany, India, and Hawaii. The one lake of its kind in the United States is by far the finest of its kind in the world. It is one of the most distinguished spots in a land notable for the nobility and distinction of its scenery.

Crater Lake lies in southern Oregon. The volcano whose site it has usurped was one of a "noble band of fire mountains which, like beacons, once blazed along the Pacific Coast." Because of its unique character and quite extraordinary beauty it was made a national park in 1902.

THE SUN PLAYS WONDERFUL TRICKS WITH LIGHTS AND SHADOWS

"THE SEA OF SILENCE"

NEARLY every visitor to Crater Lake, even the most prosaic, describes it as mysterious. To those who have not seen it, the adjective is difficult to analyze, but the fact remains.

The explanation may lie in Crater Lake's remarkable color scheme. The infinite range of grays, silvers, and pearls in the carved and fretted lava walls, the glinting white of occasional snow patches, the olives and pine greens of woods and mosses, the vivid, cloud-flecked azure of the sky, and the lake's thousand shades of blue, from the brilliant turquoise of its edges to the black blue of its depths of deepest shadow, strike into silence the least impressionable observers. "The Sea of Silence," Joaquin Miller calls Crater Lake.

With changing conditions of sun and air, this amazing spectacle changes key with the passing hours; and it is hard to say which is its most rapturous condition of beauty, that of cloudless sunshine or that of twilight shadow; or of what intermediate degree, or of storm or of shower or of moonlight or of starlight. At times the scene changes magically while you watch.

STORY OF MOUNT MAZAMA

FEW of the astonishing pictures which geology has restored for us of this world in its making are so startling as that of Mount Mazama, which once reared a smoking peak many thousands of feet above the present peaceful level of Crater Lake. There were many noble volcanoes in the range: Mount Baker, Mount Rainier, Mount Adams, Mount St. Helens, Lassen Peak, Mount Mazama, Mount Hood, Mount Shasta. Once their vomitings built the great Cascade Mountains. To-day, cold and silent, they stand wrapped in shining armor of ice.

But not all. One is missing. Where Mount Mazama reared his noble head, there is nothing—until you climb the slopes once his foothills, and gaze spellbound over the broken lava cliffs into the lake which lies magically where once he stood. The story of the undoing of Mount Mazama, of the birth of this wonder lake, is one of the great stories of the earth.

Mount Mazama fell into itself. It is as if some vast cavern formed in the earth's seething interior into which the entire volcano suddenly slipped. The imagination of Doré might have reproduced some hint of the titanic spectacle of the disappearance of a mountain fifteen thousand feet in height.

When Mount Mazama collapsed into this vast hole, leaving clean cut the edges which to-day are Crater Lake's surrounding cliffs, there was instantly a surging back. The crumbling lavas were forced again up the huge chimney.

But not all the way. The vent became jammed. In three spots only did the fires emerge again. Three small volcanoes formed in the hollow.

But these in turn soon choked and cooled. During succeeding ages springs poured their waters into the vast cavity, and Crater Lake was born. Its rising waters covered two of the small volcanic cones. The third still emerges. It is called Wizard Island.

SUNSET

THE LEGEND OF LLAO

ACCORDING to the legend of the Klamath and Modoc Indians the mystic land of Gaywas was the home of the great god Llao. His throne in the infinite depths of the blue waters was surrounded by his warriors, giant crawfish able to lift great claws out of the water and seize too venturesome enemies on the cliff tops.

War broke out with Skell, the god of the neighboring Klamath Marshes. Skell was killed and his heart used for a ball by Llao's monsters. But an eagle, one of Skell's servants, captured it in flight, and escaped with it; and Skell's body grew again around his living heart. Once more he was powerful, and once more he waged war against the God of the Lake.

Then Llao was captured; but he was not so fortunate. Upon the highest cliff his body was torn into fragments and cast into the lake, and eaten by his own monsters under the belief that it was Skell's body. But when Llao's head was thrown in, the monsters recognized it, and would not eat it.

Llao's head still lies in the lake, and white men call it Wizard Island. And the cliff where Llao was torn to pieces is named Llao Rock.

LOOKING DOWN INTO THE CRATER OF WIZARD ISLAND

VIEWED FROM THE RIM

S

EVERAL days may profitably be spent upon the rim of the lake, which one may travel afoot or on horseback. The endless variety of lava formations and of color variation may be here studied to the best advantage.

The temperature of the water has been the subject of much investigation. The average observations of years show that, whatever may be the surface variations, the temperature of the water below a depth of three hundred feet continues approximately 39 degrees the year around. This disposes of the theory that the depths of the lake are affected by volcanic heat.

"Apart from its attractive scenic features," writes J. S. Diller of the United States Geological Survey, "Crater Lake affords one of the most interesting and instructive fields for the study of volcanic geology to be found anywhere in the world. Considered in all its aspects, it ranks with the Grand Canyon of the Colorado, the Yosemite Valley, and the Falls of Niagara, but with an individuality that is superlative."

TROUT RUN FROM ONE TO SIX POUNDS

CRATER LAKE is seen in its glory from a launch. One may float for days upon its surface without sating one's sense of delighted surprise; for all is new again with every change of light. The Phantom Ship, for instance, sometimes wholly disappears. Now it is there, and a few minutes after, with new slants of light, it is gone—a phantom indeed. So it is with many headlands and ghostlike palisades.

This lake was not discovered until 1853. Eleven Californians had undertaken once more the search for the famous, perhaps fabulous, Lost Cabin Mine. For many years parties had been searching the Cascades; again they had come into the Rogue River region. With all their secrecy their object became known, and a party of Oregonians was hastily organized to stalk them and share their find. The Californians discovered the pursuit and divided their party. The Oregonians did the same. It became a game of hide-and-seek. When provisions were nearly exhausted all the parties joined forces.

“Suddenly we came in sight of water,” writes J. W. Hillman, then the leader of the combined party; “we were much surprised, as we did not expect to see any lakes and did not know but that we had come in sight of and close to Klamath Lake. Not until my

Photograph by Fred H. Kiser, Portland, Oregon

THE FAVORITE WAY TO SEE THE SCULPTURED CLIFFS IS FROM A MOTOR BOAT

mule stopped within a few feet of the rim of Crater Lake did I look down, and if I had been riding a blind mule I firmly believe I would have ridden over the edge to death."

It is interesting that the discoverers quarreled on the choice of a name, dividing between Mysterious Lake and Deep Blue Lake. The advocates of Deep Blue Lake won the vote, but in 1869 a visiting party from Jacksonville renamed it Crater Lake, and this, by natural right, became its title.

HOTELS AND CAMPS

Partly because it is off the main line of travel, but chiefly because its unique attractions are not yet well known, Crater Lake has been seen by comparatively few. Under concession from the Department of the Interior, a comfortable camp is operated five miles from the lake and a newly completed hotel and camp on the lake's rim. Equipments for camping may be hired.

HARD FIGHTING TROUT

THIS magnificent body of cold fresh water originally contained no fish of any kind. A small crustacean was found in large numbers in its waters, the suggestion, no doubt, upon which was founded the Indian legend of the gigantic crawfish which formed the body-guard of the great god Llao.

In 1888 Will G. Steel brought trout fry from a ranch fifty miles away, but no fish were seen in the lake for more than a dozen years. Then a few were taken, one of which was fully thirty inches long.

Since then trout have been taken in ever-increasing numbers. They are best caught by fly casting from the shore. For this reason the fishing is not always the easiest. Often the slopes are not propitious for casting. One has to climb upon outlying rocks to reach the waters of best depth. But the results usually justify the effort. The trout range from one to ten pounds in weight. Anglers of experience in western fishing testify that, pound for pound, the rainbow trout taken in the cold deep waters of Crater Lake are the hardest-fighting trout of all.

Many fish are also taken from rowboats. A trolling spoon will often lure large fish.

YESTERDAY AND TO-DAY

CITIES OF THE PAST

ONE December day in 1888 Richard and Alfred Wetherell, searching for lost cattle on the Mesa Verde near their home at Mancos, Colorado, pushed through dense growths on the edge of a deep canyon and shouted aloud in astonishment. Across the canyon, tucked into a shelf under the overhanging edge of the opposite brink, were the walls and towers of what seemed to them a palace. They named it Cliff Palace.

Forgetting the cattle in their excitement, they searched the edge of the mesa in all directions. Near by, under the overhanging edge of another canyon, they found a similar group, no less majestic, which they named Spruce Tree House because a large spruce grew out of the ruins.

Thus was discovered the most elaborate and best-preserved prehistoric ruins in America, if not in the world.

A careful search of the entire Mesa Verde in the years following has resulted in many other finds of interest and importance. In 1906 Congress set aside the region as a national park. Even yet its treasures of antiquity are not all known. A remarkable temple to the sun was unearthed in 1915.

MANY GATHERED NIGHTLY AROUND THE CAMP FIRE TO HEAR DR. FEWKES TELL THE STORY OF THE ANCIENT PEOPLE

THE STORY OF THE MESAS

THOSE who have traveled through our Southwestern States have seen from the car window innumerable mesas or isolated plateaus rising abruptly for hundreds of feet from the bare and often arid plains. The word mesa is Spanish for table.

Once the level of these mesa tops was the level of all of this vast Southwestern country, but the rains and floods of centuries have washed away the softer earths down to its present level, leaving standing only the rocky spots or those so covered with surface rocks that the rains could not reach the softer gravel underneath.

The Mesa Verde, or green mesa (because it is covered with stunted cedar and pinyon trees in a land where trees are few), is perhaps most widely known.

The Mesa Verde is one of the largest mesas. It is fifteen miles long and eight miles wide. At its foot are masses of broken rocks rising from three hundred to five hundred feet above the bare plains. Above these rise the cliffs.

The cliff dwellings nestle under its overhanging cliffs near the top.

IN THE CLIFF DWELLINGS

LIFE must have been difficult in this dry country when the Mesa Verde communities flourished in the sides of these sandstone cliffs. Game was scarce and hunting arduous. The Mancos River yielded a few fish. The earth contributed berries or nuts. Water was rare and found only in sequestered places near the heads of the canyons. Nevertheless, the inhabitants cultivated their farms and raised their corn, which they ground on flat stones called metates. They baked their bread on flat stone griddles. They boiled their meat in well-made vessels, some of which were artistically decorated.

Their life was difficult, but confidently did they believe that they were dependent upon the gods to make the rain fall and the corn grow. They were a religious people who worshipped the sun as the father of all and the earth as the mother who brought them all their material blessings. They possessed no written language and could only record their thoughts by a few symbols which they painted on their earthenware jars or scratched on the rocks.

As their sense of beauty was keen, their art, though primitive, was true; rarely realistic, generally symbolic. Their decoration of cotton fabrics and ceramic work might be called beautiful, even when judged by the highly developed taste of to-day. They fashioned axes, spear points, and rude tools of stone; they wove sandals and made attractive basketry.

They were not content with rude buildings and had long outgrown the caves that satisfied less civilized Indians farther north and south of them.

The photographs of Cliff Palace on the following three pages will show not only the protection afforded by the overhanging cliffs but the general scheme of community living.

The population was composed of a series of units, possibly clans, each of which had its own social organization more or less distinct from the others. Each had ceremonial rooms, called kivas. Each also had living rooms and storerooms. There were twenty-three social units or clans in Cliff Palace.

The kivas were the rooms where the men spent most of the time devoted to ceremonies, councils, and other gatherings. The religious fraternities were limited to the men of a clan.

CLIFF PALACE IS THE MOST CELEBRATED OF THE MESA VERDE RUINS BECAUSE IT IS THE
LARGEST AND MOST PROMINENT

DISCOVERY OF SUN TEMPLE

UNTIL the summer of 1915 no structures had been discovered in the Mesa Verde except those of the cliff-dwelling type. Then the Department of the Interior explored a mound on the top of the mesa opposite Cliff Palace and unearthed Sun Temple. Dr. J. Walter Fewkes, who conducted the exploration, believes that this was built about 1300 A. D. and marks the final stage in Mesa Verde development.

Sun Temple was a most important discovery. It marked a long advance toward civilization. It occupied a commanding position convenient to many large inhabited cliff dwellings. Its masonry showed growth in the art of construction. Its walls were embellished by geometrical figures carved in rock.

A fossil palm leaf, which the Cliff Dwellers supposed to be a divinely carved image of the sun, is embedded in the temple's walls.

THE MESA'S LITTLE PEOPLE

INDIANS of to-day shun the ruins of the Mesa Verde. They believe them inhabited by spirits whom they call the Little People. It is vain to tell them that the Little People were their own ancestors; they refuse to believe it.

When the national park telephone line was building in 1915 the Indians were greatly excited. Coming to the Supervisor's office to trade, they shook their heads ominously.

The poles wouldn't stand up, they declared. Why? Because the Little People wouldn't like such an uncanny thing as a telephone.

But poles were standing, the Supervisor pointed out. All right, the Indians replied, but wait. The wires wouldn't talk. Little People wouldn't like it.

The poles were finally all in and the wires strung. What was more, the wires actually did talk and are still talking.

Never mind, say the Indians, with unshaken faith. Never mind. Wait. That's all. It will come. The Little People may stand it—for a while. But wait. The Supervisor is still waiting.

SPRUCE TREE HOUSE HIDES UNDER A HUGE OVERHANGING CLIFF

THE PRINCIPAL DWELLINGS

CLIFF PALACE is the most celebrated of the Mesa Verde ruins because it is the largest and most prominent. Others are no less interesting and important. Spruce Tree House is next in size; Balcony House and Peabody House are equally well preserved. There are many others; some of which have yet to be thoroughly explored; probably some still undiscovered.

Cliff Palace is three hundred feet long; Spruce Tree House two hundred and sixteen. Cliff Palace contained probably two hundred rooms; Spruce Tree House a hundred and fourteen. Spruce Tree House originally had three stories. Its population was probably three hundred and fifty.

The Round Tower in Cliff Palace is an object of unusual interest, but the ceremonial kivas, or religious rooms, in all the communities are usually round and often were entered from below.

A subterranean entrance to Cliff Palace was recently discovered.

TYPICAL SKULLS OF PREHISTORIC MAN FOUND IN THE MESA VERDE

These skulls show an unusual breadth as compared with Indians of to-day, though of the same ethnological type. Nordenskiöld concludes that the race was fairly robust, with heavy skeletons and strong muscular processes. The facial bones are well developed and lower jaw heavy

SUMMER UPON MESA VERDE

MESA VERDE NATIONAL PARK is in the extreme southwestern corner of Colorado and is reached by two routes from Denver. A night is usually spent en route, and the ruins are reached by wagon, horseback, or automobile from Mancos.

Apart from the ruins, the country is one of much beauty and interest. The highest spot on the mesa is Park Point, 8,515 feet in altitude. The mesa's northern edge is a fine bluff two thousand feet above the Montezuma Valley, whose irrigation lakes and brilliantly green fields are set off nobly against the distant Rico Mountains. To the west are the La Salle and Blue Mountains in Utah, with Ute Mountain in the immediate foreground.

The views are inspiring, the entire country "different." In the spring the entire region blooms. It used to be a country of wild animals and at times deer are still plentiful. There is a fairly comfortable camp near Spruce Tree House.

An unusual attraction of the summer of 1915 was the unearthing of the great mound which covered Sun Temple. Dr. Fewkes maintained a camp near the mound and lectured almost nightly to those who gathered around his camp fire. The same informal custom will probably be resumed during succeeding summers while the exploration of other suggestive mounds is progressing.

ST. MARY CHALET, TYPICAL OF GLACIER ARCHITECTURE

AN ALPINE PARADISE

NOTWITHSTANDING the sixty glaciers from which it derives its name, the Glacier National Park is chiefly remarkable for its picturesquely modeled peaks, the unique quality of its mountain masses, its gigantic precipices, and the romantic loveliness of its two hundred and fifty lakes.

Though most of our national parks possess similar general features in addition to those which sharply differentiate each from every other, the Glacier National Park shows them in special abundance and unusually happy combination. In fact, it is the quite extraordinary, almost sensational, massing of these scenic elements which gives it its marked individuality.

The broken and diversified character of this scenery, involving rugged mountain tops bounded by vertical walls sometimes more than four thousand feet high, glaciers perched upon lofty rocky shelves, unexpected waterfalls of peculiar charm, rivers of milky glacier water, lakes unexcelled for sheer beauty by the most celebrated of sunny Italy and snow-topped Switzerland, and grandly timbered slopes sweeping into valley bottoms, offer a continuous yet ever changing series of inspiring vistas not to be found in such luxuriance and perfection elsewhere.

And this rare scenic combination is not alone of one valley of the park, but is characteristic of them all; so that it is difficult to single out any part of these

Photograph by Fred H. Kiser, Portland, Oregon

CLIMBING THE UPPER REACHES OF THE BLACKFEET GLACIER

fifteen hundred square miles that is more beautiful, more remarkable, or more strikingly diversified than any other.

The Glacier National Park lies in northwestern Montana, abutting the Canadian boundary. It incloses the Continental Divide of the Rocky Mountains at that point; in fact, from one spot, known as the Triple Divide, waters flow into the Pacific Ocean, Hudson Bay, and the Gulf of Mexico.

It is interesting that Glacier's peculiarly rugged topography is practically limited to the park's boundaries. To the north, in Canada, the mountains subside into low, rounded ridges. To the south and west, though still fine, they lose the quality of majesty. Easterly lie the Plains.

The transcontinental railway traveler skirts the park without hint of the supreme beauty so near at hand. But let him stop at Glacier Park station or at Belton and, after swift rides in autostages, see something of the beauties of Lake St. Mary, Lake McDermott, or Lake McDonald, and he will instantly understand the attractive force which draws thousands across the continent, and will some day draw thousands across the seas, to stand spellbound before these awe-inspiring examples of nature's noblest handiwork.

MAKING A NATIONAL PARK

H

OW nature, just how many millions of years ago no man can estimate, made the Glacier National Park is a stirring story.

Once this whole region was covered with water, probably the sea. The earthy sediments deposited by this water hardened into rocky strata. If you were in the park to-day you would see broad horizontal streaks of variously colored rock in the mountain masses thousands of feet above you. They are discernible in the photographs in this book. They are the very strata that the waters deposited in their depths in those far-away ages.

How they got from the seas' bottoms to the mountains' tops is the story.

Photograph by Ellis Prentice Cole

ICEBERG LAKE WHERE FLOES DRIFT IN AUGUST

According to one famous theory of creation, the earth has been contracting through unnumbered cycles of time. Just as the squeezed orange bulges in places, so this region was forced upward. Then it cracked and the western edge was thrust far over the eastern edge.

The edge thus thrust over was many thousands of feet thick and disclosed all the geological strata which had been deposited at that time. In the many centuries of centuries since that time all these strata except the next to the oldest in the earth's history have been washed away, disclosing here rocks which geologists think are at least eighty millions of years old.

Under this incalculable pressure from its sides and below, the bottom of the sea gradually rose and became dry land. The pressure continued, and the earth's crust, like the skin of the squeezed orange, bulged in long irregular lines. In time these became mountains.

Photograph by L. D. Lindley

ONE OF THE WILDEST SPOTS ON EARTH IS PTARMIGAN LAKE

Then, when the rocky crust could no longer stand the strain, it cracked.

Gradually the western edge of this great crack was forced upward and over the eastern edge. This relieved the internal pressure and the overlapping edge settled into its present position. Geologists call this process faulting.

The edge thus thrust over was many thousand feet thick. It disclosed all the geological strata of the earth which had been deposited up to that time. In the many centuries of centuries since, all these strata have been washed away, except the very oldest, those of the Algonkian period, which geologists think are at least eighty millions of years old. It is this ancient rock which gives the Glacier National Park its individuality.

Then this remaining edge of rock crumbled into peaks and precipices.

Upon these the rains of uncounted centuries of centuries since have fallen, and the ice and the frost and the rushing waters have carved them into the area of distinguished beauty which is to-day the American Switzerland.

To picture this region, imagine a chain of very lofty mountains twisting about like a worm, spotted with snow fields, and bearing glistening glaciers. Imagine them flanked everywhere by lesser peaks and tumbled mountain masses of smaller size in whose hollows lie the most beautiful lakes you have ever dreamed of.

ITS LAKES AND VALLEYS

Photograph by Fred H. Kiser, Portland, Oregon

THE supreme glory of the Glacier National Park is its lakes. The world has none to surpass, perhaps few to equal them. Some are valley gems grown to the water's edge with forests. Some are cradled among precipices. Some float ice fields in midsummer.

From the Continental Divide seven principal valleys drop precipitously upon the east, twelve sweep down the longer western slopes. Each valley holds between its feet its greater lake to which are tributary many smaller lakes of astonishing wildness.

On the east side St. Mary Lake is destined to world-wide celebrity, but so also is Lake McDonald on the west side. These are the largest in the park.

But some, perhaps many, of the smaller lakes are candidates for beauty's highest honors. Of these, Lake McDermott with its minaretted peaks stands first—perhaps because best known, for here is one of the finest hotels in any national park and a luxurious camp.

Upper Two Medicine Lake is another east-side candidate widely known because of its accessibility, while far to the north the Belly River Valley, difficult to reach and seldom seen, holds lakes, fed by eighteen glaciers, which will compare with Switzerland's noblest.

The west-side valleys north of McDonald constitute a little-known wilderness of the earth's choicest scenery, destined to future appreciation.

The Continental Divide is usually crossed by the famous Gunsight Pass Trail, which skirts giant precipices and develops sensational vistas in its serpentine course.

THE END OF THE DAY

COMFORT AMONG GLACIERS

A SMALL but imposing aggregate of the scenery of the Glacier National Park is available to the comfort-loving traveler. There are two entrances, each with a railroad station. The visitor choosing the east entrance, at Glacier Park, will find autostages to Two Medicine Lake, St. Mary Lake, and Lake McDermott.

At the railway station and at Lake McDermott are elaborate modern hotels with every convenience. At Two Medicine Lake, at St. Mary and Upper St. Mary Lakes, at Cut Bank Creek, at Lake McDermott, at a superb point below the Sperry Glacier, and at Granite Park are chalets or camps, or both, where excellent accommodations may be had at modest charges.

The visitor choosing the west entrance, at Belton, will find camps and chalets there, and an autostage to beautiful Lake McDonald, where there is a hotel of comfort and individuality.

There is boat service on Upper St. Mary Lake and Lake McDonald.

But if the enterprising traveler desires to know this wilderness wonderland in all its moods and phases, he must equip himself for the rough trail and the wayside camp. Thus he may devote weeks, months, summers to the benefiting of his health and the uplifting of his soul.

CLEARING AFTER THE STORM

PURCHASED FROM INDIANS

ONCE this region was the favorite hunting ground of the Blackfeet Indians, whose reservation adjoins it on the east. It was then practically unknown to white men. In 1890 copper was found and there was a rush of prospectors. To open it for mining purposes Congress bought the region from the Indians in 1896, but not enough copper was found to pay for the mining. After the miners left, few persons visited it but big-game hunters until 1910, when it was made a national park.

Photograph by National Park Service

MOUNT OBERLIN FROM GRANITE PARK, SHOWING THE NOBLE SOUTH WALL ON A CLOUDY DAY

CREATURES OF THE WILD

GLACIER, once the favorite hunting ground of the Blackfeet and now

for fifteen years strictly preserved, has a large and growing population of creatures of the wild. Its rocks and precipices fit it especially to be the home of the Rocky Mountain sheep and the mountain goat.

Both of these large and hardy climbers are found in Glacier in great numbers. They constitute a familiar sight in many of the places most frequented by tourists.

Trout fishing is particularly fine. The trout are of half a dozen western varieties, of which perhaps the cutthroat is the most common. In Lake St. Mary the Mackinaw is caught up to twenty pounds in weight.

So widely are they distributed that it is difficult to name lakes of special fishing importance.

FALL RIVER ENTRANCE TO THE ROCKY MOUNTAIN NATIONAL PARK

“TOP OF THE WORLD”

FOR many years the Mecca of eastern mountain lovers has been the Rockies. For many years the name has summed European ideas of American mountain grandeur. Yet it was not until 1915 that a particular section of the enormous area of magnificent and diversified scenic range thus designated was chosen as the representative of the noblest qualities of the whole. This is the Rocky Mountain National Park.

And it is splendidly representative. In nobility, in calm dignity, in the sheer glory of stalwart beauty, there is no mountain group to excel the company of snow-capped veterans of all the ages which stands at everlasting parade behind its grim, helmeted captain, Longs Peak.

There is probably no other scenic neighborhood of the first order which combines mountain outlines so bold with a quality of beauty so intimate and refined. Just to live in the valleys in the eloquent and ever-changing presence of these carved and tinted peaks is itself satisfaction. But to climb into their embrace, to know them in the intimacy of their bare summits and their flowered, glaciated gorges, is to turn a new and unforgettable page in experience.

The park straddles the Continental Divide at a point of supreme magnificence. Its eastern gateway is beautiful Estes Park, a valley village of many hotels from which access up to the most noble heights and into the most picturesque recesses of the Rockies is easy and comfortable. Its western entrance is Grand Lake.

Photograph by Agnes W. Vaille

LONGS PEAK, FROM A SMALL LAKE AT THE ENTRANCE TO GLACIER GORGE, SHOWING ITS PRECIPITOUS WESTERN SIDE

THE KING AND HIS KINGDOM

THE Snowy Range lies, roughly speaking, north and south. From valleys 8,000 feet high, the peaks rise to 12,000 and 14,000 feet. Longs Peak measures 14,255 feet.

The gentler slopes are on the west, a region of loveliness, heavily wooded, diversified by gloriously modeled mountain masses, and watered by many streams and rock-bound lakes. The western entrance, Grand Lake, is a thriving center of hotel and cottage life.

On the east side the descent from the Continental Divide is steep in the extreme. Precipices two or three thousand feet plunging into gorges carpeted with snow patches and wild flowers are common. Seen from the east-side villages, this range rises in daring relief, craggy in outline, snow-spattered, awe-inspiring.

Midway of the range and standing boldly forward from its western side, Longs Peak rears his lofty, square-crowned head. A veritable King of Mountains—stalwart, majestic.

Amazingly diversified is this favored region.

The valleys are checkered with broad, flowery opens and luxuriant groves of white-stemmed aspens and dark-leaved pines. Singing rivers and shining lakes abound. Frost-sculptured granite cliffs assume picturesque shapes. Always some group of peaks has caught and held the wandering clouds.

Very different are the mountain vistas. From the heights stretches on every hand a tumbled sea of peaks. Dark gorges open underfoot. Massive granite walls torn from their fastenings in some unimaginable upheaval in ages before man impose their gray faces. Far in the distance lie patches of molten silver which are lakes, and threads of silver which are rivers, and mists which conceal far-off valleys. On sunny days lies to the east a dim sea which is the Great Plain.

AN ASPEN THICKET TRAIL IS A PATH OF
DELIGHT

THE visitor will not forget the aspens in the Rocky Mountain National Park. Their white trunks and branches and their luxuriant bright green foliage are never out of sight. A trail through an aspen thicket is a path of delight.

Because of the unusual aspen growths, the region is the favored home of beavers, who make the tender bark their principal food. Beaver dams block countless streams and beaver houses emerge from the still ponds above. In some retired spots the engineering feats of generations of beaver families may be traced in all their considerable range.

Nowhere is the picturesqueness of timber line more quickly and more easily seen. A horse after early breakfast, a steep mountain trail, an hour of unique enjoyment, and one may be back for late luncheon.

Eleven thousand feet up, the winter struggles between trees and icy gales are grotesquely exhibited.

The first sight of luxuriant Engelmann spruces creeping closely upon the ground instead of rising a hundred and fifty feet straight and true as masts is not soon forgotten. Many stems strong enough to partly defy the winters' gales grow bent in half circles. Others, starting straight in shelter of some large rock, bend at right angles where they emerge above it. Many succeed in lifting their trunks but not in growing branches except in their lee, thus suggesting great evergreen dust brushes.

THE STANLEY HOTEL AND MANOR

EASY TO REACH AND TO SEE

THIS accessibility of the Rocky Mountain National Park is apparent by a glance at any map. Denver is less than thirty hours from St. Louis and Chicago, two days only from New York. Four hours from Denver will put you in Estes Park.

Once there, comfortable in one of its many hotels of varying range of tariff, and the summits and the gorges of this mountain-top paradise resolve themselves into a choice between foot and horseback.

There are also a few most comfortable houses and several somewhat primitive camps within the park's boundaries at the very foot of its noblest scenery.

LONGS PEAK INN; ALTITUDE 9,000 FEET

THE NATIONAL PARKS AT A GLANCE

Number, 17; Total Area, 9,774 Square Miles. Arranged chronologically in the order of their creation.

NATIONAL PARK and Date	LOCATION	AREA in square miles	DISTINCTIVE CHARACTERISTICS
HOT SPRINGS RES- ERVATION 1832	Middle Arkansas	1½	46 hot springs possessing curative properties—Many hotels and boarding houses in adjacent city of Hot Springs—Bathhouses under public control.
YELLOWSTONE 1872	North- western Wyoming	3,348	More geysers than in all rest of world together—Boiling springs—Mud volcanoes—Petrified forests—Grand Canyon of the Yellowstone, remarkable for gorgeous coloring—Large lakes and waterfalls—Vast wilderness inhabited by deer, elk, bison, moose, antelope, bear, mountain sheep, etc.; greatest wild bird and animal preserve in world.
YOSEMITE 1890	Middle eastern California	1,125	Valley of world-famed beauty—Lofty cliffs—Romantic vistas—Waterfalls of extraordinary height—3 groves of big trees—Large areas of snowy peaks—Waterwheel falls.
SEQUOIA 1890	Middle eastern California	252	The Big Tree National Park—12,000 sequoia trees over 10 feet in diameter, some 25 to 36 feet in diameter.
GENERAL GRANT 1890	Middle California	4	Created to preserve the celebrated General Grant Tree, 35 feet in diameter—6 miles from Sequoia National Park.
MOUNT RAINIER 1899	West central Washington	324	Largest accessible single-peak glacier system—28 glaciers, some of large size—48 square miles of glacier, 50 to 1,000 feet thick—Remarkable subalpine wild-flower fields.
CRATER LAKE 1902	Southern Oregon	249	Lake of extraordinary blue in crater of extinct volcano, no visible inlet, or outlet—Sides 1,000 feet high.
PLATT 1904	Southern Oklahoma	1½	Sulphur and other springs possessing curative properties—Under Government regulation.
MESA VERDE 1906	Southern Colorado	77	Most notable and best-preserved prehistoric cliff dwellings in United States, if not in the world.
GLACIER 1910	North- western Montana	1,534	Rugged mountain region of unsurpassed alpine character—250 glacier-fed lakes of romantic beauty—60 small glaciers—Peaks of unusual shape—Precipices thousands of feet deep—Fine trout fishing.
ROCKY MOUNTAIN 1915	Northern Colorado	398	Heart of the Rockies—Snowy Range, peaks 11,000 to 14,250 feet altitude—Remarkable records of glacial period.
HAWAII 1916	Hawaii	118	Two active volcanoes, Mauna Loa, largest in the world, and Kilauea, whose lake of bubbling lava is world famed—A third volcano, Haleakala, whose crater, 8 miles wide, contains many cones.
LASSEN VOLCANIC 1916	Northern California	124	Active volcano—Lassen Peak, 10,437 feet in altitude—Cinder Cone, 6,907 feet—Hot springs—Mud geysers.
MOUNT MCKINLEY 1917	South central Alaska	2,200	Highest Mountain in North America—Rises higher above surrounding country than any mountain in the world.

National Parks of less popular interest are:

Casa Grande Ruin, 1889, Arizona..... Prehistoric Indian ruin.
 Wind Cave, 1903, South Dakota..... Large natural cavern.
 Sullys Hill, 1904, North Dakota..... Wooded hilly tract on Devils Lake.

HOW TO REACH THE NATIONAL PARKS

The map shows the location of all of our National Parks and their principal railroad connections. The traveler may work out his routes to suit himself. Low round-trip excursion fares to the American Rocky Mountain region and Pacific Coast may be availed of in visiting the National Parks during their respective seasons, thus materially reducing the cost of the trip. Transcontinental through trains and branch lines make the Parks easy of access from all parts of the United States. For schedules and excursion fares to and between the National Parks apply to your local railway ticket office or to any excursion agency, or write to the Passenger Departments of the railroads which appear on the above map, as follows:

ARIZONA EASTERN RAILROAD	Tucson, Ariz.
ATCHISON, TOPEKA & SANTA FE RAILWAY	1119 Railway Exchange, Chicago, Ill.
CHICAGO & NORTH WESTERN RAILWAY	225 West Jackson Boulevard, Chicago, Ill.
CHICAGO, BURLINGTON & QUINCY RAILROAD CO.	517 West Jackson Boulevard, Chicago, Ill.
CHICAGO, MILWAUKEE & ST. PAUL RAILWAY	Railway Exchange, Chicago, Ill.
CHICAGO, ROCK ISLAND & PACIFIC RAILWAY CO.	La Salle Street Station, Chicago, Ill.
COLORADO & SOUTHERN RAILWAY	Railway Exchange Building, Denver, Colo.
DENVER & RIO GRANDE RAILROAD CO.	Equitable Building, Denver, Colo.
GREAT NORTHERN RAILWAY	Railroad Building, Fourth and Jackson Streets, St. Paul, Minn.
GULF, COLORADO & SANTA FE RAILWAY	Galveston, Tex.
ILLINOIS CENTRAL RAILROAD	Central Station, Chicago, Ill.
MISSOURI PACIFIC RAILWAY	Railway Exchange Building, St. Louis, Mo.
NORTHERN PACIFIC RAILWAY	Railroad Building, Fifth and Jackson Streets, St. Paul, Minn.
SAN PEDRO, LOS ANGELES & SALT LAKE RAILROAD	Pacific Electric Building, Los Angeles, Cal.
SOUTHERN PACIFIC CO.	Flood Building, San Francisco, Cal.
UNION PACIFIC SYSTEM	Garland Building, 58 East Washington Street, Chicago, Ill.
WABASH RAILWAY	Railway Exchange Building, St. Louis, Mo.
WESTERN PACIFIC RAILWAY	Mills Building, San Francisco, Cal.

For information about sojourning and traveling within the National Parks write to the Department of the Interior for the Information circular of the Park or Parks in which you are interested.

NATIONAL PARK SERVICE

GENERAL VIEW OF HOT SPRINGS RESERVATION, THE FIRST NATIONAL PARK

MAIN ENTRANCE TO THE HOT SPRINGS RESERVATION

SPRINGS OF HEALING

FROM the slopes of a picturesque wooded hill among the wild and romantic Ozark Mountains of Arkansas flow springs of hot water whose powers to alleviate certain bodily ills have been recognized for many generations. Tradition has it that their curative properties were known to the Indians long before the Spanish invasion. It is probable that they were known to De Soto, who died in 1542, less than a hundred miles away. It is tradition that Indian warring tribes suspended all hostilities at these healing springs whose neighborhood they called "The Land of Peace."

Government analyses of the waters disclose more than twenty chemical constituents, but it is not these nor their combination to which is principally attributed the water's unquestioned helpfulness in many disordered conditions, but to their remarkable radioactivity.

The reservation is the oldest national park, having received that status in 1832, forty years before the wonders of the Yellowstone first inspired Congress with the idea that scenery was a national asset deserving of preservation for the use and enjoyment of succeeding generations. No aesthetic consideration was involved in this early act of national conservation. Congress was inspired only by the undoubted, but at that time inexplicable, natural power of these waters to alleviate certain bodily ills. The motive was to retain these unique waters in public possession to be available to all persons for all time at a minimum, even a nominal, cost.

THE PROMENADE AT HOT SPRINGS

MAURICE SPRING, HOT SPRINGS RESERVATION

This is centrally located and hundreds of persons visit it daily

ONE OF THE BEST GOLF COURSES IN THE SOUTH

DR. NATURE'S WATER CURE

HOT SPRINGS has much besides its curative waters to attract and hold the visitor. It has one of the best and most interesting golf courses in the South. The surrounding country is romantically beautiful. Many miles of woodland trail lead the walker and the horseback rider through pine-scented glades and glens and over mountain tops of unusual charm. There is tennis for the young folks, ostrich and alligator farms for the curious, and the gayeties of life in big hotels for all.

Hot Springs is not merely a winter resort, as used to be supposed. Climate and conditions are delightful the year around, as increasing throngs are rapidly discovering. It is above all a place for rest and recuperation. More and more winter visitors are remaining through April and May, when the spring is young and glorious and the baths the most efficacious. But those who remain after March should bring summer clothing, as the temperature then ranges from 65 to 85 degrees.

The reservation includes three mountains and a lake, and the tract incloses all the forty-six hot springs. Eleven bathhouses, some of them as complete and luxurious in equipment as any in the world, are in the reservation, and a dozen more in the city, all under Government regulation. There are also cold springs possessing curative properties.

There are many hotels, the largest having accommodations for a thousand guests, and several hundred boarding houses, many at very modest prices. Cottages and apartments may be rented for light housekeeping.

Hot Springs Mountain, from whose sides flow the cleansing waters, is about fifty miles west by south from Little Rock.

THE GOLF CLUB AT HOT SPRINGS

ITS PICTURESQUE HISTORY

THE recorded history of Hot Springs goes back to 1804, when four log houses accommodated the people who traveled many weary miles of trail to bathe in the waters. The lands adjacent to the springs were claimed by conflicting interests which, as the waters grew in fame, waged legal battles for many years for possession. Then followed a generation of lax law when Hot Springs became the winter gathering place of gamblers. This was the most picturesque period in its history.

In recent years, with the awakening of the public conscience, the uplifting of the public taste, and the enactment of laws prohibiting gambling, Hot Springs has made rapid strides toward its manifest and enviable destiny.

THERE ARE MANY HOTELS; THIS ONE, THE ARLINGTON, IS ONE OF THE LARGEST

HAWAII'S SMOKING SUMMITS

THE Hawaii National Park, created in 1916, includes three celebrated Hawaiian volcanoes, Kilauea, Mauna Loa, and Haleakala. "The Hawaiian Volcanoes," writes T. A. Jaggar, director of the Hawaiian Volcano Observatory, "are truly a national asset, wholly unique of their kind, the most famous in the world of science and the most continuously, variously, and harmlessly active volcanoes on earth. Kilauea crater has been nearly continuously active, with a lake or lakes of molten lava, for a century. Mauna Loa is the largest active volcano and mountain mass in the world, with eruptions about once a decade, and has poured out more lava during the last century than any other volcano on the globe. Haleakala is a mountain mass ten thousand feet high, with a tremendous crater rift in its summit eight miles in diameter and three thousand feet deep, containing many high lava cones.

"Haleakala is probably the largest of all known craters among volcanoes that are technically known as active. It erupted less than two hundred years ago. The crater at sunrise is the grandest volcanic spectacle on earth."

The lava lake at Kilauea is the most spectacular feature of the new national park. It draws visitors from all over the world. It is a lake of molten, fiery lava a thousand feet long, splashing on its banks with a noise like waves of the sea, while great fountains boil through it fifty feet high.

The park also includes gorgeous tropical jungles and fine forests. Sandalwood, elsewhere extinct, grows there luxuriantly. There are mahogany groves.

MOUNT MCKINLEY, MONSTER OF MOUNTAINS.

MONSTER OF MOUNTAINS

MOUNT McKinley is the loftiest mountain in America. It towers 20,300 feet above tide. Its gigantic ice-covered bulk rises more than 17,000 feet above the eyes of the observer standing within the national park. It is ice plated 14,000 feet below its glistening summit.

Congress created the Mount McKinley National Park in February, 1917. This enormous mass is the climax of the great Alaskan Range, which extends, roughly, east and west across southeast central Alaska, separating the vast northern inland from the more populated country whose shores are the Gulf of Alaska. The range parallels the mighty Yukon many miles to its south.

The reservation contains 2,200 square miles. Its northern slopes, which overlook the Tanana watershed with its gold-mining industry, are broad valleys inhabited by enormous herds of caribou. Its southern plateau is a winter wilderness through which glaciers of great length and enormous bulk flow into the valleys of the south. In this national park, which the railroad now building by Government into the Alaskan interior will open presently to the public, America possesses Alpine scenery upon a titanic scale. In fact, it matches the Himalayas; as a spectacle Mount McKinley even excels their loftiest peaks,

for the altitude of the valleys from which the Himalayas are viewed exceeds by many thousand feet that of the plains from which the awed visitor looks up to McKinley's towering height.

From the stormy south Mount McKinley is wholly inaccessible. But from the plains of the north valleys of easy grade lead one from another to its very foot. Many attempts to climb it have failed. Only two, however, have met success, and these after almost unendurable hardship. With the completion of the Government railroad, however, this mountain pageant will be within three weeks of New York. The tourist can see all its beauty and sublimity without hardship.

"It is an awe-inspiring region of massive mountains and ice-capped peaks," Belmore Browne, of the Camp Fire Club, testified before the Senate Committee on Territories. "The Piedmont Plateau, that follows the range, affords a beautiful roadway direct to Mount McKinley, and when you reach the plateau all difficulties vanish and you see a view that is unique on this earth. You see the huge mountain line of perpetual snow rising like a great wall on the southeast. You can ride a pony to where Mount McKinley rises 17,000 feet above you in a glittering wall of snow and ice. It is flanked by stupendous mountains, which make a wonderful setting for the monster."

North of the vast mountain, however, is a rolling country dotted with beautiful lakes and forests and inhabited by enormous herds of caribou. In fact, the special reason why Congress set apart the region at this time was to conserve the wild animal life in advance of the invasion of hunters which the new Government railroad will bring into Alaska, the road as projected running within 20 miles of this greatest of nature's spectacles.

Charles Sheldon, of the Boone and Crockett Club, told the Senate committee that several times he has counted as many as 500 mountain sheep in a single day of ordinary travel, and that herds of caribou numbering from twelve to fifteen hundred are frequently seen.

As a game refuge and breeding ground the new national park conserves Alaskan game which elsewhere is rapidly disappearing. As in the case of the Yellowstone National Park, the reservation serves as a perpetual center of game supply for large neighboring areas.

These animals do not greatly fear man, because they have never been hunted. One can approach the great herds of caribou. There are also many Alaskan bear of great size.

CLIMBING MOUNT MCKINLEY—THE SUMMIT FROM THE SOUTHEAST

Photograph by P. J. Thompson

CRATER OF LASSEN PEAK AFTER ERUPTION OF 1914

ACTIVE VOLCANO AT HOME

CONGRESS created the Lassen Volcanic National Park in August, 1916. A month later this volcano was again in active eruption; it is the only active volcano in the continental United States. It is situated in northern California, and is one of the celebrated series of peaks, including Mount Baker, Mount Rainier, Mount Hood, Mount Shasta, and what was once Mount Mazama (Crater Lake), in the Cascade Range.

The region is one of extraordinary interest. Lassen Peak is 10,437 feet in altitude. Cinder Cone, which showed some activity a few years ago, has an altitude of 6,907 feet. North Peak, Southwest Peak, and Prospect Peak are prominent elevations in the National Park.

Other features of interest are the Devils Half Acre, inclosing hot springs and mud geysers, Bumpass and Morgan Hot Springs, lakes of volcanic glass, and ice caves. There are seven lakes, numerous trout streams, and many majestic canyons. There are also forests of yellow and white pine, fir, and lodgepole.

"On the whole," writes Prof. Douglas W. Johnson, of Columbia University, "it is difficult to imagine a region where the more striking phenomena of nature are developed on a grander scale."

Photograph by W. S. Valentine

LASSEN PEAK IN ERUPTION, JULY, 1914

CATHEDRAL ROCKS, MUKUNTUWEAP

NAL MONUMENT, SOUTHERN UTAH

OTHER NATIONAL PARKS

THE WIND CAVE NATIONAL PARK

THE Black Hills of southwestern South Dakota, scene of Custer's first stand, famous for many years for Indian fights and frontier lawlessness, are chiefly celebrated in this generation for a limestone cave of large size and interesting decoration. It is called Wind Cave because of the strong currents of air which alternate in and out of its mouth.

The walls and ceiling of the various passages and chambers which constitute the cave are elaborately covered with the formations common to most caves, which here result in tracery and carvings of the most elaborate and surprising description. The park is also a game preserve of unusual merit.

THE PLATT NATIONAL PARK

SOUTHERN Oklahoma's famous curative springs were conserved for the public benefit in 1906 by the creation of the Platt National Park. Sulphur springs predominate, but there are bromide and other springs of medicinal value, besides several fine springs nonmineral in character. Altogether they have an approximate discharge of nearly five million gallons daily.

Many thousands visit these springs every year. The country is one of great charm and is notable for its bird life. The healing waters are bottled and shipped to many parts of the country.

THE CASA GRANDE RUIN

ONE of the best preserved and most interesting ruins in the Southwest has been preserved in this reservation, which is near Florence, Arizona. Unlike the neighborhood Indians who fear the superb ruins of the Mesa Verde, the Arizona Pimas claim the Casa Grande as the home of their ancestors; but there is nothing but tradition to substantiate the claim.

The structure was once at least four stories high. Many mounds in the neighborhood indicate that it was once one of a large group of dwellings of some importance. The ruin was discovered by the intrepid Jesuit Missionary, Father Eusebio Francisco Kino, at the end of the seventeenth century.

SULLYS HILL PARK

THIS reservation is on the shore of Devils Lake, North Dakota, within two miles of the well-known Fort Totten Indian School. It is a country of much natural beauty and admirably adapted to the purposes of a game preserve, for which Congress recently made appropriations.

THE NATIONAL MONUMENTS

THE DIFFERENCE BETWEEN A NATIONAL MONUMENT AND A NATIONAL PARK

NATIONAL monuments differ from national parks principally in importance. The monument is usually the lesser area, and, the object being merely conservation, little provision is made for its maintenance and development.

A national park is created only by act of Congress, and it is expected that thereafter Congress will make yearly appropriations to develop it. A national monument is set aside by Presidential proclamation without appropriations.

The name "monument" is clumsy and misleading.

THE MUKUNTUWEAP NATIONAL MONUMENT

THE Mukuntuweap National Monument, in southwestern Utah, conserves a canyon that for fantastic outline and brilliant and varied coloring probably equals any spot on this continent. Recent visitors have called it "the desert Yosemite;" others, "the mimic Grand Canyon." It inevitably suggests both. "You can't see it without shouting," reports one recent explorer.

The Mormons of a former generation chose this valley for a refuge in the event of being driven from Zion, as they called Salt Lake City, and named it Little Zion. It is locally called Zion Canyon to-day. The north fork of the muddy Virgin River flows through it, and in the spring streams cascade from the lofty walls.

The canyon is a mighty cleft, as if the mountain had been violently divided to obtain a segment. The walls are inconceivably carved into domes, half domes, colonnades, and temples. One gigantic cliff suggests a battleship, and is locally called "Steamboat."

The faces of some of the walls contain thousands of square feet of plane surface, upon which the elements have sketched various figures. At one point may be seen the picture of a woman, a horse, and a pig, forming a distinct group. At another an eagle perches, true to this noble bird's instinct, high upon the cliffs. At other points crypts have been formed in the walls by the shelling off of the stone surface. Nature seems to have fashioned here a fine art gallery of stupendous proportions.

The coloring is beyond description. Glistening white is the basic color. Below this a strip of maroon-colored sandstone has weathered into formations resembling those of the Grand Canyon. There are thousands of feet of polished white sandstone streaked with vermillion, like a Roman sash.

The canyon is more than fifteen miles long and varies from fifty feet wide in the narrows to twenty-five hundred feet wide in Zion proper. The neighborhood is rich in striking phenomena. There are natural bridges of great size and beauty. The country was settled by Mormons many years ago, and possesses much historical interest. Old-time Mormon customs obtain in the prosperous villages. Mukuntuweap may be reached by automobile and horseback from Lund, Utah.

A GLIMPSE OF THE BEAUTIFUL MUIR WOODS

IN THE FOREST PRIMEVAL

WITHIN ten miles of the city of San Francisco, in Marin County, California, lies one of the noblest forests of primeval Redwood in America. That it stands to-day is due first to the fact that its outlet to the sea instead of to San Francisco Bay made it unprofitable to lumber in the days when redwoods grew like grain on California's hills.

The Muir Woods National Monument contains three hundred acres. Interspersed with the superb Redwood, the *Sequoia sempervirens*, sister to the Giant Sequoia of the Sierra, are many fine specimens of Douglas fir, Madrona, California Bay, and Mountain Oak. The forest blends into the surrounding wooded country. It is essentially typical of the redwood growth, with a rich stream-watered bottom carpeted with ferns, violets, oxalis, and azalea.

Many of the redwoods are magnificent specimens and some have extraordinary size. Cathedral Grove, and Bohemian Grove, where the famous revels of the Bohemian club were held before the club purchased its own permanent grove, are unexcelled in luxuriant beauty.

This splendid area of forest primeval was named by its donors, Mr. and Mrs. William Kent, in honor of the celebrated naturalist of the Sierra, John Muir. It is so near San Francisco that thousands are able to enjoy its cathedral aisles of noble trees.

IT IS ONE OF THE NOBLEST FORESTS OF REDWOOD SAVED FROM THE AXE

SIEUR DE MONTS CRAG, LOOKING TOWARD BAR HARBOR

THERE ARE EXQUISITE LAKES, ALSO, IN THE SIEUR DE MONTS NATIONAL MONUMENT

SEA AND MOUNTAINS MEET

BY proclamation of July 8, 1916, creating the Sieur de Monts National Monument, President Wilson extended the national park service for the first time to the Atlantic coast. The area which enjoys this honor is one of fascinating historical association as well as majestic natural beauty. It embraces more than five thousand acres of rugged mountain, directly south of Bar Harbor. In fact, its northern boundary lies within a mile of that famous resort. On the east it touches the Schoonerhead Road. On its south it approaches within a mile of Seal Harbor. It lies less than a mile northeast of Northeast Harbor. It is surrounded, in short, by a large summer population.

This area includes four lakes and no less than ten mountains. The lakes are Jordan Pond, Eagle Lake, Bubble Pond, and Sargent Mountain Pond. The Bowl lies just outside the boundary line. The mountains, several of which are widely celebrated, are Green Mountain, Dry Mountain, Picket Mountain, White Cap, Newport Mountain, Pemetic Mountain, The Tryad, Jordan Mountain, The Bubbles, and Sargent Mountain.

The lands included in the Sieur de Monts National Monument have never formed a part of the public domain, but, through the patriotism and generosity of the former owners, known collectively as the Hancock County Trustees of Public Reservations, were presented to the United States. The trustees were represented in the matter by Mr. George B. Dorr, of Boston, who, in the creation of this national monument, attained the object of years of public-spirited endeavor.

MONTEZUMA CASTLE

MONTEZUMA CASTLE NATIONAL MONUMENT

THIS remarkable relic of a prehistoric race is the principal feature of a well-preserved group of cliff dwellings in the northeastern part of Yavapai County, Arizona, known as the Montezuma Castle National Monument. The unique position and size of the ruin gives it the appearance of an ancient castle; hence its name.

The structure is about fifty feet in height by sixty feet in width, built in the form of a crescent, with the convex part against the cliff. It is five stories high, the fifth story being back under the cliff and protected by a masonry wall four feet high, so that it is not visible from the outside. The walls of the structure are of masonry and adobe, plastered over on the inside and outside with mud.

DEVILS TOWER NATIONAL MONUMENT

THIS extraordinary mass of igneous rock is one of the most conspicuous features in the Black Hills region of Wyoming.

The tower is a steep-sided shaft rising six hundred feet above a rounded ridge of sedimentary rocks, about six hundred feet high, on the west bank of the Belle Fourche River. Its nearly flat top is elliptical in outline. Its sides are strongly fluted by the great columns of igneous rock, and are nearly perpendicular, except near the top, where there is some rounding; and near the bottom, where there is considerable outward flare. The tower has been scaled in the past by means of special apparatus, but only at considerable risk.

The great columns of which the tower consists are mostly pentagonal in shape, but some are four or six sided.

THE DEVILS TOWER, WYOMING

THE GREATEST OF UTAH'S FOUR MAGNIFICENT NATURAL BRIDGES

NATURAL BRIDGES NATIONAL MONUMENT

THE natural bridges for whose preservation this national monument in San Juan County, Utah, was created are understood to be among the largest examples of their kind, the greatest of the three having a height of two hundred and twenty-two feet, and a thickness of sixty-five feet at the top of the arch. The arch is twenty-eight feet wide, the span two hundred and sixty-one feet, and the height of the span one

hundred and fifty-seven feet. The other two bridges are a little smaller. All occur within about five miles. The whole constitutes a really imposing spectacle.

In the neighborhood are found, in addition to a couple of fine cavern springs and other interesting and scientifically valuable natural curiosities, many prehistoric ruins of cavern and cliff dwellings and two cavern springs.

THE CHACO CANYON NATIONAL MONUMENT

THE Chaco Canyon National Monument preserves remarkable relics of a prehistoric people once inhabiting New Mexico. Here are found numerous communal or pueblo dwellings built of stone, among which is the ruin known as Pueblo Bonito, containing, as it originally stood, twelve hundred rooms. It is the largest prehistoric ruin in the Southwest.

So difficult are they of access that little excavation has been done.

SHOSHONE CAVERN NATIONAL MONUMENT

A FEW miles east of the celebrated Shoshone Dam, in Wyoming, is found the entrance to the picturesque cave to preserve which the Shoshone Cavern National Monument was created.

Some of the rooms are a hundred and fifty feet long and forty or fifty feet high, and all are remarkably encrusted with limestone crystals.

The passages through the cavern are most intricate, twisting, turning, doubling back, and descending so abruptly that ladders are often necessary.

COLORADO NATIONAL MONUMENT

THIS area, near Grand Junction, Colorado, is similar to that of the Garden of the Gods at Colorado Springs, only much more beautiful and picturesque. With possibly two exceptions it exhibits probably as highly colored, magnificent, and impressive examples of erosion, particularly of lofty monoliths, as may be found anywhere in the West.

These monoliths are located in several tributary canyons. Some of them are of gigantic size; one over four hundred feet high is almost circular and a hundred feet in diameter at base. Some have not yet been explored.

LEWIS AND CLARK CAVERN NATIONAL MONUMENT

THE feature of this national monument is a limestone cavern of great scientific interest because of its length and because of the number of large vaulted chambers it contains. It is of historic interest, also, because it overlooks for more than fifty miles the Montana trail of Lewis and Clark.

The vaults of the cavern are magnificently decorated with stalactite and stalagmite formations of great variety of size, form, and color, the equal of, if not rivaling, the similar formations in the well-known Luray caves in Virginia. The cavern has been closed on account of depredations of vandals.

THE DINOSAUR NATIONAL MONUMENT

THE Dinosaur National Monument in Northeastern Utah was created to preserve remarkable fossil deposits of extinct reptiles of great size. The reservation contains eighty acres of Juratrias rock.

For years prospectors and residents had been finding large bones in the neighborhood, and in 1909 Prof. Earl B. Douglass of the Carnegie Museum of Pittsburgh, under a permit from the Department of the Interior, undertook a scientific investigation. The results exceeded all expectation. Remains of many enormous animals which once inhabited what is now our Southwestern States have been unearthed in a state of fine preservation. These include complete and perfect skeletons of large dinosaurs.

The chief find was the perfect skeleton of a brontosaurus eighty-five feet long and sixteen feet high which may have weighed, when living, twenty tons.

UNEARTHING THE SKELETON OF A GIANT DINOSAUR OF PREHISTORIC DAYS

RAINBOW BRIDGE NATIONAL MONUMENT

THIS natural bridge is located within the Navajo Indian Reservation, near the southern boundary of Utah, and spans a canyon and small stream which drains the northwestern slopes of Navajo Mountain. It is of great scientific interest as an example of eccentric stream erosion.

Among the known extraordinary natural bridges of the world, this bridge is unique in that it is not only a symmetrical arch below but presents also a curved surface above, thus suggesting roughly a rainbow. Its height above the surface of the water is three hundred and nine feet and its span is two hundred and seventy-eight feet.

The existence of this natural wonder was first disclosed to William B. Douglass, an examiner of surveys of the General Land Office, on August 14, 1909, by a Piute Indian called "Mike's boy," later "Jim," who was employed in connection with the survey of the natural bridges in White Canyon, Utah.

THE PAPAGO SAGUARO NATIONAL MONUMENT

WITHIN this national monument, which lies about nine miles east of Phoenix, Arizona, and less than a dozen miles from the Apache Trail, grow splendid examples of characteristic desert flora, including many striking specimens of giant cactus (saguaro) and many other interesting species of cacti, such as the prickly pear and cholla. There are also fine examples of the yucca. All here attain great size and perfection. The saguaro is that variety of cactus which grows in a cylindrical form to a height of thirty or thirty-five feet. There are also prehistoric pictographs upon the rocks.

EL MORRO NATIONAL MONUMENT

EL MORRO, or Inscription Rock, in western central New Mexico, is an enormous sandstone rock rising a couple of hundred feet out of the plain and eroded in such fantastic form as to give it the appearance of a great castle. A small spring of water at the rock made it a convenient camping place for the Spanish explorers of the sixteenth, seventeenth, and eighteenth centuries, and its smooth face well adapted it to receive the inscriptions of the conquerors.

The earliest inscription is dated February 18, 1526. Historically the most important inscription is that of Juan de Oñate, a colonizer of New Mexico and the founder of the city of Santa Fe, in 1606. It was in this year that Oñate visited El Morro and carved this inscription on his return from a trip to the head of the Gulf of California. There are nineteen other Spanish inscriptions, among them that of Don Diego de Vargas, who in 1692 reconquered the Pueblo Indians after their rebellion against Spanish authority in 1680.

PINNACLES NATIONAL MONUMENT

THE spires, domes, caves, and subterranean passages of the Pinnacles National Monument in San Benito County, California, are awe-inspiring on close inspection, and are well worth a visit by tourists and lovers of natural phenomena.

The name is derived from the spirelike formations arising from six hundred to a thousand feet from the floor of the canyon, forming a landmark visible many miles in every direction. Many of the rocks can not be scaled.

A series of caves, opening one into the other, lie under each of the groups of rock. These vary greatly in size, one in particular, known as the Banquet Hall, being about a hundred feet square, with a ceiling thirty feet high.

CAPULIN MOUNTAIN NATIONAL MONUMENT

CAPULIN MOUNTAIN is a volcanic cinder cone of recent origin, six miles southwest of Folsom, N. Mex. It is the most magnificent specimen for a considerable group of craters. Capulin has an altitude of eight thousand feet, rising fifteen hundred feet above the surrounding plain. It is almost a perfect cone.

THE PETRIFIED FOREST OF ARIZONA

THE Petrified Forest of Arizona lies in the area between the Little Colorado River and the Rio Puerco, fifteen miles east of their junction. This area is of interest because of the abundance of petrified coniferous trees. It has exceptional scenic features, also.

The trees lie scattered about in great profusion; none, however, stands erect in its original place of growth, as in the Yellowstone National Park.

The trees probably at one time grew beside an inland sea; after falling they became water-logged, and during decomposition the cell structure of the wood was entirely replaced by silica from sandstone in the surrounding land.

SITKA NATIONAL MONUMENT, ALASKA

THIS monument reservation is situated about a mile from the steamboat landing at Sitka, Alaska. Upon this ground was located formerly the village of a warlike tribe—the Kik-Siti Indians—where the Russians under Baranoff in 1802 fought and won the “decisive battle of Alaska” against the Indians and effected the lodgment that offset the then active attempts of Great Britain to possess this part of the country. The Russian title thus acquired to the Alexander Archipelago was later transferred to the United States.

A celebrated “witch tree” of the natives and sixteen totem poles, several of which are examples of the best work of the savage genealogists of the Alaska clans, stand sentrylike along the beach.

THE TUMACACORI NATIONAL MONUMENT

THE Tumacacori National Monument in Santa Cruz County, Arizona, was created to preserve a very ancient Spanish mission ruin dating, it is thought, from the latter part of the sixteenth century. It was built by Jesuit priests from Spain and operated by them for over a century.

After the year 1769 priests belonging to the order of Franciscan Fathers took charge of the mission and repaired its crumbling walls, maintaining peaceable possession for about sixty years, until driven out by Apache Indians.

GRAN QUIVIRA NATIONAL MONUMENT

THE Gran Quivira has long been recognized as one of the most important of the earliest Spanish church or mission ruins in the Southwest. It is in Central New Mexico. Near by are numerous Indian pueblo ruins, occupying an area many acres in extent, which also, with sufficient land to protect them, was reserved. The outside dimensions of the church ruin, which is in the form of a short-arm cross, are about forty-eight by one hundred and forty feet, and its walls are from four to six feet thick and from twelve to twenty feet high.

NAVAJO NATIONAL MONUMENT

THIS tract encloses three interesting and extensive prehistoric pueblos or cliff-dwelling ruins in an excellent state of preservation. These are known as the Betata Kin, the Keet Seel, and Inscription House.

Inscription House Ruin, on Navajo Creek, is regarded as extraordinary, not only because of its good state of preservation, but because of the fact that upon the walls of its rooms are found inscriptions written in Spanish by early explorers and plainly dated 1661.

THE NATIONAL PARKS AT A GLANCE

Number, 17; Total Area, 9,774 Square Miles. Arranged chronologically in the order of their creation

NATIONAL PARK and Date	LOCATION	AREA in square miles	DISTINCTIVE CHARACTERISTICS
HOT SPRINGS RES- ERVATION 1832	Middle Arkansas	1 $\frac{1}{2}$	46 hot springs possessing curative properties—Many hotels and boarding houses in adjacent city of Hot Springs— Bathhouses under public control.
YELLOWSTONE 1872	North- western Wyoming	3,348	More geysers than in all rest of world together—Boiling springs—Mud volcanoes—Petrified forests—Grand Canyon of the Yellowstone, remarkable for gorgeous coloring— Large lakes and waterfalls—Vast wilderness inhabited by deer, elk, bison, moose, antelope, bear, mountain sheep, etc.; greatest wild bird and animal preserve in world.
YOSEMITE 1890	Middle eastern California	1,125	Valley of world-famed beauty—Lofty cliffs—Romantic vis- tas—Waterfalls of extraordinary height—3 groves of big trees—Large areas of snowy peaks—Waterwheel falls.
SEQUOIA 1890	Middle eastern California	252	The Big Tree National Park—12,000 sequoia trees over 10 feet in diameter, some 25 to 36 feet in diameter.
GENERAL GRANT 1890	Middle California	4	Created to preserve the celebrated General Grant Tree, 35 feet in diameter—6 miles from Sequoia National Park.
MOUNT RAINIER 1899	West central Washington	324	Largest accessible single-peak glacier system—28 glaciers, some of large size—48 square miles of glacier, 50 to 1,000 feet thick—Remarkable subalpine wild-flower fields.
CRATER LAKE 1902	Southern Oregon	249	Lake of extraordinary blue in crater of extinct volcano, no visible inlet, or outlet—Sides 1,000 feet high.
PLATT 1904	Southern Oklahoma	1 $\frac{1}{2}$	Sulphur and other springs possessing curative properties— Under Government regulation.
MESA VERDE 1906	Southern Colorado	77	Most notable and best-preserved prehistoric cliff dwellings in United States, if not in the world.
GLACIER 1910	North- western Montana	1,534	Rugged mountain region of unsurpassed alpine character— 250 glacier-fed lakes of romantic beauty—60 small gla- ciers—Peaks of unusual shape—Precipices thousands of feet deep—Fine trout fishing.
ROCKY MOUNTAIN 1915	Northern Colorado	398	Heart of the Rockies—Snowy Range, peaks 11,000 to 14,250 feet altitude—Remarkable records of glacial period.
HAWAII 1916	Hawaii	118	Two active volcanoes, Mauna Loa, largest in the world, and Kilauea, whose lake of bubbling lava is world famed— A third volcano, Haleakala, whose crater, 8 miles wide, contains many cones.
LASSEN VOLCANIC 1916	Northern California	124	Active volcano—Lassen Peak, 10,437 feet in altitude— Cinder Cone, 6,907 feet—Hot springs—Mud geysers.
MOUNT MCKINLEY 1917	South central Alaska	2,200	Highest Mountain in North America—Rises higher above surrounding country than any mountain in the world.

National Parks of less popular interest are:

Casa Grande Ruin, 1889, Arizona..... Prehistoric Indian ruin.
Wind Cave, 1903, South Dakota..... Large natural cavern.
Sullys Hill, 1904, North Dakota..... Wooded hilly tract on Devils Lake.

LEAVING EL TOVAR FOR A SCENIC RIM DRIVE

COLOSSUS OF CANYONS

MORE mysterious in its depth than the Himalayas in their height," writes Professor John C. Van Dyke, "the Grand Canyon remains not the eighth but the first wonder of the world. There is nothing like it."

Even the most superficial description of this enormous spectacle may not be put in words. The wanderer upon the rim overlooks a thousand square miles of pyramids and minarets carved from the painted depths. Many miles away and more than a mile below the level of his feet he sees a tiny silver thread which he knows is the giant Colorado.

He is numbed by the spectacle. At first he can not comprehend it. There is no measure, nothing which the eye can grasp, the mind fathom.

It may be hours before he can even slightly adjust himself to the titanic spectacle, before it ceases to be utter chaos; and not until then does he begin to exclaim in rapture.

And he never wholly adjusts himself, for with dawning appreciation comes growing wonder. Comprehension lies always just beyond his reach.

The Colorado River is formed by the confluence of the Grand and the Green Rivers. Together they gather the waters of three hundred thousand square miles. Their many canyons reach this magnificent climax in northern Arizona. The Grand Canyon is a national monument administered by the Department of Agriculture.

THE RIM ROAD AFFORDS MANY GLORIOUS VIEWS

BY SUNSET AND MOONRISE

WHEN the light falls into it, harsh, direct, and searching," writes Hamlin Garland, "it is great, but not beautiful. The lines are chaotic, disturbing—but wait! The clouds and the sunset, the moonrise and the storm, will transform it into a splendor no mountain range can surpass. Peaks will shift and glow, walls darken, crags take fire, and gray-green mesas, dimly seen, take on the gleam of opalescent lakes of mountain water."

STILL FARTHER DOWN THE HERMIT TRAIL

PAINTED IN MAGIC COLORS

THE blues and the grays and the mauves and the reds are second in glory only to the canyon's size and sculpture. The colors change with every changing hour. The morning and the evening shadows play magicians' tricks.

"It seems like a gigantic statement for even Nature to make all in one mighty stone word," writes John Muir. "Wildness so Godful, cosmic, primeval, bestows a new sense of earth's beauty and size. . . . But the colors, the living, rejoicing colors, chanting morning and evening in chorus to heaven! Whose brush or pencil, however lovingly inspired, can give us these? In the supreme flaming glory of sunset the whole canyon is transfigured, as if the life and light of centuries of sunshine stored up in the rocks was now being poured forth as from one glorious fountain, flooding both earth and sky."

THE PROFOUND ABYSS

ROMANTIC INDIAN LEGEND

THE Indians believed the Grand Canyon the road to heaven.

A great chief mourned the death of his wife. To him came the god Ta-vwoats and offered to prove that his wife was in a happier land by taking him there to look upon her happiness. Ta-vwoats then made a trail through the protecting mountains and led the chief to the happy land. Thus was created the canyon gorge of the Colorado.

On their return, lest the unworthy should find this happy land, Ta-vwoats rolled through the trail a wild, surging river. Thus was created the Colorado.

WHEN CLOUDS AND CANYON MEET AND MERGE

MASTERPIECE OF EROSION

THE rain falling in the plowed field forms rivulets in the furrows. The rivulets unite in a muddy torrent in the roadside gutter. With succeeding showers the gutter wears an ever-deepening channel in the soft soil. With the passing season the gutter becomes a gully. Here and there, in places, its banks undermine and fall in. Here and there the rivulets from the field wear tiny tributary gullies. Between the breaks in the banks and the tributaries irregular masses of earth remain standing, sometimes resembling mimic cliffs, sometimes washed and worn into mimic peaks and spires.

Such roadside erosion is familiar to us all. A hundred times we have idly noted the fantastic water-carved walls and minaretted slopes of these ditches. But seldom, perhaps, have we realized that the muddy roadside ditch and the world-famous Grand Canyon of the Colorado are, from nature's standpoint, identical; that they differ only in soil and size.

The arid States of our great Southwest constitute an enormous plateau or table-land from four to eight thousand feet above sea level.

Rivers gather into a few desert water systems. The largest of these is that which, in its lower courses, has, in unnumbered ages, worn the mighty chasm of the Colorado.

The Colorado rolls through many miles of vast canyons before it reaches Grand Canyon

POWELL'S GREAT ADVENTURE

THE Grand Canyon was the culminating scene of one of the most stirring adventures in the history of American exploration.

For hundreds of miles the Colorado and its tributaries form a mighty network of mighty chasms which few had ventured even to enter. Of the Grand Canyon, deepest and hugest of all, tales were current of whirlpools, of hundreds of miles of underground passage, and of giant falls whose roaring music could be heard on distant mountain summits.

The Indians feared it. Even the hardest of frontiersmen refused it.

It remained for a geologist and a school-teacher, a one-armed veteran of the Civil War, John Wesley Powell, afterwards director of the United States Geological Survey, to dare and to accomplish.

This was in 1869. Nine men accompanied him in four boats.

There proved to be no impassable whirlpools in the Grand Canyon, no underground passages, and no cataracts. But the trip was hazardous in the extreme. The adventurers faced the unknown at every bend, daily—sometimes several times daily—embarking upon swift rapids without guessing upon what rocks or in what great falls they might terminate. Continually they upset. They were unable to build fires sometimes for days at a stretch.

Four men deserted, hoping to climb the walls, and were never heard from again—and this happened the very day before Major Powell and his faithful half dozen floated clear of the Grand Canyon into safety.

EASY TO REACH AND TO SEE

IT is possible to get a glimpse of the Grand Canyon by lengthening your transcontinental trip one day, but this day must be spent either on the rim or in one hasty rush down the Bright Angel Trail to the river's edge; one can not do both the same day. Two arduous days, therefore, will give you a rapid glance at the general features. Three days will enable you to substitute the newer Hermit Trail, with a night in the canyon, for the Bright Angel Trail. Four or five days will enable you to *see* the Grand Canyon; but after you see it you will want to live with it awhile. There are two other trails, the Bass Trail and the Grand View.

The canyon should be seen first from the rim. Hours, days, may be spent in emotional contemplation of this vast abyss. Navajo Point, Grand View, Shoshone Point, El Tovar, Hopi Point, Sentinel Point, Pima Point, Yuma Point, the Hermit Rim—these are a few only of many spots of inspiration.

An altogether different experience is the descent into the abyss. This is done on mule-back over trails which zigzag steeply but safely down the cliffs.

The hotels, camps, and facilities for getting around are admirable. Your sleeper brings you to the very rim of the canyon.

HOW TO REACH THE NATIONAL PARKS

The map shows the location of all of our National Parks and their principal railroad connections. The traveler may work out his routes to suit himself. Low round-trip excursion fares to the American Rocky Mountain region and Pacific Coast may be availed of in visiting the National Parks during their respective seasons, thus materially reducing the cost of the trip. Transcontinental through trains and branch lines make the Parks easy of access from all parts of the United States. For schedules and excursion fares to and between the National Parks apply to your local railway ticket office or to any excursion agency, or write to the Passenger Departments of the railroads which appear on the above map, as follows:

ARIZONA EASTERN RAILROAD	Tucson, Ariz.
ATCHISON, TOPEKA & SANTA FE RAILWAY	1119 Railway Exchange, Chicago, Ill.
CHICAGO & NORTH WESTERN RAILWAY	226 West Jackson Boulevard, Chicago, Ill.
CHICAGO, BURLINGTON & QUINCY RAILROAD CO.	517 West Jackson Boulevard, Chicago, Ill.
CHICAGO, MILWAUKEE & ST. PAUL RAILWAY	Railway Exchange, Chicago, Ill.
CHICAGO, ROCK ISLAND & PACIFIC RAILWAY CO.	La Salle Street Station, Chicago, Ill.
COLORADO & SOUTHERN RAILWAY	Railway Exchange Building, Denver, Colo.
DENVER & RIO GRANDE RAILROAD CO.	Equitable Building, Denver, Colo.
GREAT NORTHERN RAILWAY	Railroad Building, Fourth and Jackson Streets, St. Paul, Minn.
GULF, COLORADO & SANTA FE RAILWAY	Galveston, Tex.
ILLINOIS CENTRAL RAILROAD	Central Station, Chicago, Ill.
MISSOURI PACIFIC RAILWAY	Railway Exchange Building, St. Louis, Mo.
NORTHERN PACIFIC RAILWAY	Railroad Building, Fifth and Jackson Streets, St. Paul, Minn.
SAN PEDRO, LOS ANGELES & SALT LAKE RAILROAD	Pacific Electric Building, Los Angeles, Cal.
SOUTHERN PACIFIC CO.	Flood Building, San Francisco, Cal.
UNION PACIFIC SYSTEM	Garland Building, 48 East Washington Street, Chicago, Ill.
WAHASH RAILWAY	Railway Exchange Building, St. Louis, Mo.
WESTERN PACIFIC RAILWAY	Mills Building, San Francisco, Cal.

For information about sojourning and traveling within the National Parks write to the Department of the Interior for the Information circular of the Park or Parks in which you are interested.
